Important

We offer our thanks to the authors of the original Privateer for their inspirational game that drove us to recreate it so that it works on our computers once again. We know their hard work and effort has not gone to waste with the obsolescence of the old game, but instead provided the seeds for and has fed and watered and allowed this remake to grow.

We would like to remind users that while the source code to the game engine (vegastrike) is GPL'd, the engine data used in Privateer Gemini Gold is for personal use only, not to be involved with anything promotional or commercial. We would like to credit the authors of Privateer and Origin Systems Inc. for their ideas and images that allow Privateer Gemini Gold to be what it is today...

Some descriptions and images in this manual were extracted from the original Privateer Manual created by Origin Systems Inc. © 1993.

Introduction

"Privateer takes you to the seamy side of the Wing Commander universe. In the far reaches of space, you live by no man's rules but your own. The fringes are populated by a volatile mix of pirates, miners, mercs and Kilrathi, all struggling to make a quick buck. With advanced technology pioneered by Wing Commander and Strike Commander, Privateer gives you the excitement of head-to-head space combat and the challenge of survival in cutthroat trading circles on the frontiers of civilization." (Back of the Official Game Box)

Considered by many as one of the grandfathers of Space Simulation games, Privateer was released as part of the Origin Systems Inc. Wing Commander® series in 1993. Based within the Wing Commander® universe, it allowed the player freedom to play the game in a completely non-linear manner. Of course, there was always the fixer mission for Sandoval...

Sadly, the original game is difficult (if not well nigh impossible) to run on modern computer systems. For those not inclined to maintain a second computer to run older games, Privateer Gemini Gold re-introduces the world of Privateer® using the Vega Strike engine.

GETTING STARTED

Acquiring the Program

To begin playing Privateer Gemini Gold, you will first need the program. You can obtain the program as follows:

Download the appropriate release file for your system from the Wing Commander Privateer website <http://www.priv.solsector.net>. Access the Downloads page, and select the latest version for your computer.

Installing the Program

This manual is written for the Windows version of Privateer Gemini Gold. The concepts and commands used herein, however, should be generally applicable to all platforms. Where there are differences, or points that have not been addressed, please forward that information to the editor or report it to the Privateer forum for inclusion in future manual updates.

Windows Installation

1. Privateer Gemini Gold is packaged in a self-installable, executable program;
2. Double click on the program self-installer file. It will begin verifying the installer (be patient, this will take a short while);
3. Read the License Agreement (a copy can be accessed in the program's directory);
4. Select which components to install. Note that the Privateer Gemini Gold files are required to play the game, and the Shortcuts are provided for ease of play access;
5. Select the directory to which you want to install the game;
6. Click Install. You will see the installer program extracting and installing all the necessary files and accessory programs to launch, configure and run Privateer Gemini Gold.

GNU/Linux Installation

Install as a user:

1. `sh privateer-1.0.run;`
2. Enter directory to locate the files (default is `/home/username/privateer`);
3. Enter directory to put symlinks to binaries. If you do not have a location for binaries in your `$path`, uncheck the "install symlinks to binaries" option, then note that the symlink is to the binary in `privateer/bin/vegastrike.sh`.

Install as root:

1. `su;`
2. `sh privateer-1.0.run;`
3. Select path to install files;
4. Install symlinks

Mac Installation

1. Double-click on the dmg image and you will see Vega Strike, Vega Strike Setup and Vega Strike Setup OS X 10.2;
2. Double-click on the setup icon;
3. Select Options.
4. Double-click on Vega Strike

Note: under mac you will notice significant performance improvements from running it directly out of the dmg file, but you can copy the Vega Strike application and setup into /Applications with no adverse effects aside from a slightly slower startup time.

Configuring Privateer Gemini Gold

Windows Configuration

To configure Privateer Gemini Gold for your system, you need to access the configuration settings:

1. Run the Privateer Setup program from the Start Menu;
2. Directly open the program file setup.exe in the /bin folder;
3. Directly editing the vegastrike.config file (recommended only for advanced use only).

Linux Configuration

To configure Privateer Gemini Gold for your system, you need to access the configuration settings:

1. First time only - run vegastrike to start the setup tool and then launch the game;
2. In the future – to change options run vegastrike --setup;
3. Directly editing the vegastrike.config file (recommended for advanced use only).

Mac Configuration

1. Double-click on the setup icon to modify your personal preferences saved in your home directory.
2. Directly editing the vegastrike.config file (recommended for advanced use only).

Configuration Settings

Save Settings and Exit			

Computer

This selection specifies the available RAM on your system for use by Privateer Gemini Gold. Determines:

- maximum number of sounds possible at any one time
- number of systems' data (objects, names, etc.) cached in RAM and background simulated
- number of systems' data (objects, names, etc.) stored to hard drive for reuse
- speed of physics rounds from which frame rates are interpolated
- play weapon sound as: single or multiple weapons; and looped sound or sound per blast

<256 Mb RAM

Low number of available sounds; limited systems caching for simulation in RAM and storage of systems data to the hard drive; simulated frame speed is very low; only plays a single looped weapon sound.

256 Mb RAM

Similar to above but simulated frame speed is slightly faster.

512 Mb RAM

Reasonable number of available sounds; more systems data is saved to the hard drive; simulated frame speed dramatically improved; plays multiple weapons sounds on a sound per blast basis.

640 Mb RAM

High number of available sounds, increased systems caching in RAM for simulation and more systems data saved to the hard drive; Slight increase in simulated frame speed.

1024 Mb RAM

Large number of systems data now saved to the hard drive for reuse and slightly faster simulated frame speed.

Optimized

This option determines how Privateer Gemini Gold draws objects.

- "Vertex Buffer Objects (VBO)" - Provides best performance but can be unstable on some systems.
- "Display Lists" - Select when stability is preferred over performance.
- "Compiled Vertex Arrays" - Select if you suffer video card crashes under Display Lists.
- "Vertex Arrays" - Select when you experience problems with all other settings.

Difficulty

This option determines the degree of in game difficulty.

"Normal Gameplay"

This is the usual level of game play, you can not change it in this release. Opponents are reasonably aggressive with average reaction times and make full use of their ship's maneuvering capabilities. Projectile weapons are employed, but not to a high degree. Player can dock when near a base.

Sound

This option determines your audio settings for sound effects and music.

- "No Sound" - No sound or music files played. Recommended on slow machines.
- "Music Only" - Play music only. All sound effects disabled.
- "Effects Only" - Play sound effects only. Music is disabled.
- "Sound & Music" - Play all sound effects and music files.
- "My Effects Only" - Player sound effects only. Music and AI sound effects disabled.
- "My Effects & Music" - Player sound effects and music files. AI sound effects disabled.

Bases

- "Normal Bases" - All in-game bases are stretched to fill the screen with no interpolation.
- "Filtered Bases" - All in-game bases are stretched to fill the screen with bilinear interpolation
- "Normal Bases Hardware Cursor" - As per Normal Bases, but the cursor is run by your hardware. Use only if you have problems with the cursor not appearing.
- "Filtered Bases Hardware Cursor" - As per Filtered Bases, but the cursor is run by your hardware. Use only if you have problems with the cursor not appearing.

Video

This selection determines the level of visual detail Privateer Gemini Gold projects to your monitor. These settings affect smoothness and rounding of objects, font style and anti-aliasing, sun halos, maximum texture size capability and whether reflection capability is available.

- "Extreme Detail" - Highest detailing available including full smoothing, halo, texturing and reflection capability available. Cockpits can be activated. Only high end video cards can operate at this setting without affecting performance.
- "Very High Detail" - The main difference is a large reduction in the level of visual detail.
- "High Detail" - Further reduction in visual detail, and reduced lighting capability.
- "Medium Detail" - Visual detail reduced with nebula fog disabled.
- "Low Detail" - Reduced visual detail with no background detailing (black only) and cockpits no longer available. All script is in reduced font size with no color differentiation. Light reflection is disabled with no haloing effects.
- "Retro Detail" - Lowest detail with no texture usage (wireframe only).

Resolution

The Resolution is currently limited to 800x600.

Per Pixel Lighting

Determines the visual lighting effects used by Privateer Gemini Gold. Going down the list increases visual effects, but requires better hardware.

- "No Specular Lighting" - This option is suggested when game performance is slow.
 - separate specular color: no
 - per pixel lighting: no
 - reflection: no
- "Specular Lighting" -
 - separate specular color: yes
 - per pixel lighting: no
 - reflection: no
- "Specular Per Pixel Lighting" – Requires pixel shader support.
 - separate specular color: no
 - per pixel lighting: yes
 - reflection: no
- "Reflective Lighting" -
 - separate specular color: yes
 - per pixel lighting: no
 - reflection: yes
- "Reflective Per Pixel Lighting" - Recommend high end graphics card with pixel shader support.
 - separate specular color: yes
 - per pixel lighting: yes
 - reflection: yes

Color

This selection determines whether the game uses full 32 bit color or the more limited 16 bit color range. It also determines whether the game runs in full screen mode (uses your whole screen limited by your resolution setting) or is windowed (appears as a window in your monitor allowing access other programs).

- "32 bit Fullscreen" – 32 bit color viewed in a full screen.
- "16 bit Fullscreen" – Reduced 16 bit color viewed in a full screen.
- "32 bit Windowed" – 32 bit color with the game viewed in a window.
- "16 bit Windowed" – Reduced 16 bit color with the game viewed in a window.

Mouse

This selection determines your mouse control during flight operations.

- "Drag to Steer" – Your craft turns in the direction of the mouse movement, but the turn only continues while your mouse moves. To continue a turn, you need to continue scrolling your mouse in the desired direction.
- "Inv Drag to Steer" – inverts the direction of "Drag to Steer".
- "Mouse Control" – Provides a 'ghost' targeting reticule that is movable around the screen. When moved away from the center, your ship will turn in the direction of the reticule. Re-centering the reticule to cease turning. This option does not require continually moving the mouse to continue a turn.
- "Inv Mouse Control" – inverts the up/down direction of "Mouse Control"
- "No Mouse" – No mouse flight.

Default Mouse Buttons

- button 0 = Fire Weapon
- button 1 = Fire Missile
- button 2 = Afterburner
- button 3 = Target (cycle all available targets)
- button 4 = Target (target nearest targeting reticule)
- button 5 = Deceleration (decrease speed)
- button 6 = Perform a Shelton Slide
- button 7 = Acceleration (increase speed)
- button 8 = Cycle through guns
- button 9 = Cycle through missiles

Font

This option determines the text display options for the in-flight HUD and base communications.

- "Arial" - Use Arial font on the HUD and on the base.
- "Times" - Use Times font on the HUD and on the base.
- "Times HUD" - Use Times font on the HUD and Arial font on the base.
- "Arial HUD" - Use Arial font on the HUD and Times font on the base.

Joystick

This selection configures your joystick for flight control. Joysticks can also be programmed by directly editing the vegastrike.config file – recommended for advanced use only. Joysticks with multiple buttons default to the button selection below.

- "No Joystick" – No joystick flight enabled.
- "2 Axis Joystick" – Enables standard 2 axis (x,y) joystick, two buttons (0,1).
- "2 Axis Joystick And Throttle" – Enables movement in the x,y directions only. Throttle control over your set velocity. Two buttons (0,1).
- "3 Axis Joystick" – Enables movement in all three directions.
- "3 Axis Joystick and Throttle" – Enables movement in all three directions, plus the use of throttle control over set velocity.
- "Backwards 3 Axis Joystick and Throttle" – Reverses the setting of third axis and uses the throttle.

Joystick Default Button Settings

- x axis = changes direction of pitch. Imagine holding your arms out sideways from your body and your hands holding on to something. You then swing your feet up and down. You are rotating on your arms (x axis).
- y axis = changes direction of yaw. Imagine standing upright, then turning in place to the left or right.
- z axis = changes direction of roll. Imagine standing upright, holding on to a pole above you running from forwards to backwards. You then swing from left to right. You are 'rolling' around the pole.
- button 0 = Fire Weapon
- button 1 = Afterburner
- button 2 = Fire Missile
- button 3 = Target (cycle all available targets)
- button 4 = Target (target nearest targeting reticule)
- button 5 = Deceleration (decrease speed)
- button 6 = Perform a Shelton Slide
- button 7 = Acceleration (increase speed)
- button 8 = Cycle through guns
- button 9 = Cycle through missiles

Launching Privateer Gemini Gold

Launching Privateer Gemini Gold in Windows

1. From the Start Menu, run the Privateer executable to launch the game;
2. Directly open the program file Privateer.exe from the \bin folder.

Launching Privateer Gemini Gold in Linux

1. Run "privateer" from your command line to launch the game.

Launching Privateer Gemini Gold for Mac

1. Double click on the Privateer icon to launch the game.

ON THE BASE

The Concourse

Landing Pad

When starting Privateer for the first time, the Landing Pad is the in-game screen you encounter first.

After you've landed at a base, the Landing Pad will usually be your first view of the base. Note the ship located in the foreground. This is your current ship. At the beginning of the game, it is the Tarsus, a gift to you from your deceased grandfather.

The Landing Pad serves two functions:

- It is the player's portal into the base. Moving the cursor around the screen will cause the exits to become highlighted. Clicking on the Concourse exit, for instance, will take you to the Concourse Screen.
- It is your departure point when launching a ship back into space. The Landing Pad displays your current ship. To launch into space, click the left mouse button on the ship.

Concourse

After you have arrived at a base, station or planet, you might want to do a series of things, which includes searching for new missions, replacing or upgrading weapons and ship, trading some cargo or just have some rest and recreation. The Concourse serves as the primary interface to all these base functions:

The usual locations are:

- **Mission Computer** (p20) - to select random missions.
- **Commodities Exchange** (p24) - to buy and sell cargo.
- **Ship Dealer** (p26) - to upgrade your ship and purchase a new ship.
- **Merchants Guild** (p41) – obtain better cargo missions after joining the guild.
- **Mercenaries Guild** (p40) – obtain better mercenary missions after joining the guild.
- **The Bar** (p43) - have a drink and chat with the locals.

Quine 4000

The Personal Computer is as important to you as to your character. Your character uses it to keep track of business obligations and finances. You use it to save and load games. Effective and quick use of the Personal Computer is crucial to both of you.

The Personal Computer answers questions like, “How much money do I have?” and “Which missions have I not finished?” and “Just what do I have in my cargo hold, anyway?”

It is only available while you are at a base. All the information it provides is available through your MFDs and nav map during space-flight. To pull up your Personal Computer, type STRG + C or click at the upper left corner of the Landing Pad.

To exit the Personal Computer, click on the PWR (power) button at the bottom of the unit. The Personal Computer cannot be accessed while you are interacting with another computer.

Therefore, you cannot access it while at the screens for the Commodities Exchange, Mission Computer, Ship Modification, Software Dealer’s or guilds’ computers.

SAVE. The Personal Computer is the only place to save a game, so you can only save while docked at a base. When you click on the save button, the screen says SAVE GAME as: and offers you a box eight characters wide in which to name your game. If you have other saved games, they are listed below the box.

To save your game, name it and click on SAVE. To save over an existing game, click on the name of the old one — it appears in the box. The only limit to the number of saved games you may have is the amount of available space on your harddrive. To exit the Personal Computer, press the PWR button at the bottom of the unit.

LOAD. You can only load a game from your Personal Computer, which is available only during your stay at a base.

When you elect to load a game, the screen reads LOAD GAME: and offers you a box in which to type the name of the previously saved game you are loading.

You may select the game you wish to load by again clicking on its name and the LOAD button, instead. Once the name of the game you wish to resume is typed in, hit LOAD. You automatically exit to the saved game.

MISSIONS. This selection allows you to review the missions that are currently awaiting your attention. If you have fulfilled all your missions or haven’t taken any, the screen says NO MISSIONS. When you still have active missions, they will be summarized on your Personal Computer mission screen. The top line tells you how many missions you have active. The rest of the description tells you where you must go to complete the mission, who has contracted you to carry it out and how much they’re paying. At the bottom of the screen is the total missions to date.

FINANCE. Clicking on FIN brings up a statement of your current cash in credits. This is a cash-only sector. People don’t tend to live long enough to be a good risk for loan sharks and banks. This is all the financial statement you’ll need.

MANIFEST. Clicking on MAN brings up your ship’s manifest, telling you what’s in your cargo hold. At the top of the screen you are informed how much space in cargo units — roughly a cubic meter — are available in your cargo hold. Below that is a list of the items you have and the units of each.

Mission Computer

We focus here on the Mission Computer. To review any available missions, you must have access to a Mission Computer. Locate the Mission Computer by moving your mouse cursor around the Concourse until it is highlighted and the name appears at the bottom of your screen then click to activate the computer.

The Mission Computer is fairly easy to use. Accept a Mission with the "Accept" Button but be aware, you can not abort accepted missions nor can you accept more than three at once. Failed missions will change your reputation to the faction you fly the mission for.

In Game Missions

One of the main aims of a Privateer pilot is to make profit. While there are several different ways to do so, we consider here the ability to accept missions that require the Privateer pilot to perform a mercenary duty for reward.

In Privateer's dynamic universe, mercenaries with a good ship - and better upgrades! – can make a living from being better than their opponents. If a merchant's milk run is not for you, your place is here! Whether you're interested in tracking down criminals for bounty, defending or attacking a nominated target, performing escort duties or patrolling the local systems, we have the job for you. The merchants aren't forgotten either. Take a cargo mission to a distant base for a premium, and then fill your cargo bay with more cargo for delivery. Even a mercenary may want to take a cargo mission once in a while, just to deliver a cargo near your target, and use the credit for that last upgrade before you do battle!

Privateer has the ability to provide a pilot with missions in two ways: firstly by accessing the Mission Computer and selecting a mission; secondly by talking to fixers in the Bar (p43).

The Mission Computer posts standard missions with a comparatively low level of reward. Multiple missions can be accepted, but don't take too many. If a pilot doesn't fulfill a mission within a reasonable timeframe, you'll lose the mission, and your reputation with the faction will suffer too.

The rarer, more profitable missions can be obtained from fixers located in bars across the known universe. From off-duty military personnel, a merchant, to smugglers or pirates, someone, somewhere, has a job for you. These missions are more dangerous, more intense and - more to the point – more rewarding than what the mission computer offers. You'd better be careful though, some missions may lead you where you didn't plan to go, and you may have bitten off more than you can chew...

Mission Types

- Cargo missions require you to deliver cargo to another destination.
- Bounty missions ask you to hunt down and kill a target.
- Escort missions want you to escort a ship from your present location to somewhere else, defending it from any and all attacks.
- Defend missions pay you to attack or defend a static target.
- Patrol missions have you patrol or scout some places in a certain system.
- There are sometimes other missions, which you will need to review closely to determine what is required.

While in flight, you may view your mission objectives in a Multi Function Display by pressing **[o]**. As you complete an objective, the color will change: Red is incomplete or impossible to complete; Yellow is partly completed; Green is complete. Once you have completed a mission, a communiqué will usually appear notifying that credits have been added to your account.

A total of three (3) missions may be accepted via the Mission Computer or from fixers.

Mission cargo remains in your cargo space until the mission is completed. If you need to remove the cargo, return to space. Select your cargo manifest using **m**, and use **PGUP** or **PGDN** to ensure the mission cargo appears topmost. Use **CTRL+x** to eject the topmost cargo. If you have a Tractor Beam, you may then tractor the mission cargo back into your hold as standard, sellable cargo.

(ED: we recommend saving your game before accepting missions, as this will then allow you to reload a game, canceling any missions previously accepted).

Missions Screen

If you are interested in flying missions for reward, you need to access the Mission Computer to see what's on offer. To do so, you must be docked at a base.

To review and select missions, follow the instructions on page 21.

Fixers

If the base has a bar, head on in and treat yourself to some rest and recreation. While you're there, check out who's seated at the tables. People of all walks of life may want to talk to you.

Fixers are representatives of the various *Privateer* factions with whom it may be profitable for you to converse. If you're interested, click on them to hear what they say. After they have finished talking, a **Reject / Accept** choice box pops up. If you're interested in what they have proposed, indicate your decision by clicking the appropriate response.

Trading Cargo

One of the main aims of a Privateer is to make a profit. While there are several different ways in which to do so, we consider here the ability to make a profit from buying and selling cargo that you transport.

In the Privateer's dynamic universe, a single merchant pilot with a small amount of credit and a good ship can try to make money trading cargo. This is usually accomplished by buying from your current location, and then delivering it to a destination that is far away, has a demand for it, or preferably both. The secret is to learn where a commodity is produced at a low cost, and where it can then be delivered for a high price. A common trade run is to buy raw materials (gems, metals and suchlike) from mining locations (such as Asteroids) and deliver them to places that utilize them (refineries, factories and industrial planets). Note, that different planets or bases will have different prices and quantities for *groups* of items. For example, Mining Bases will have cheaper minerals.

Another way to make money as a merchant is to accept Cargo Missions (p20), which pay a premium for delivering specific cargoes to specific destinations (these missions are covered elsewhere).

The key is to determine what trade routes and what cargoes provide the most profit - and the only way to work this out is by actually transporting cargo. When you are looking at the various cargoes at a base, have a look at the prices listed for other cargoes. You may well discover a new trade route if you're careful!

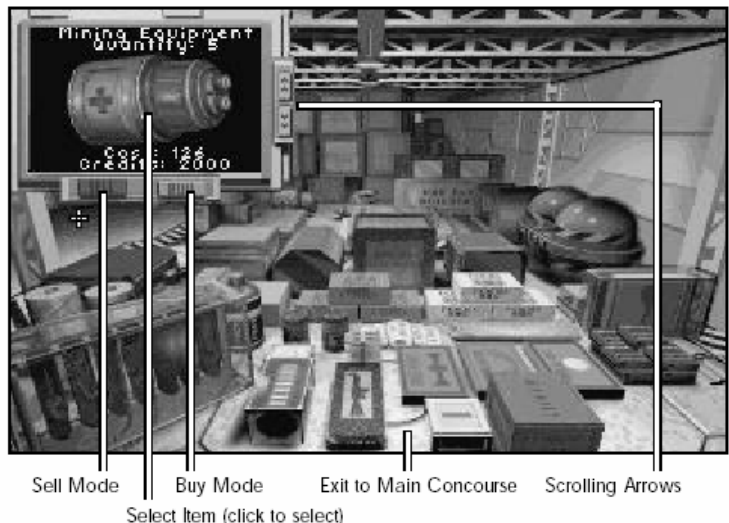

Just imagine the profit you could make if you discovered a good trade route, and the news reports had a surplus of cargo where you need to buy, and shortage where you need to sell!

Commodities Exchange

To trade cargo, you must have access to a Commodities Exchange. Locate the Commodities Exchange by moving your mouse cursor around the Concourse until it is highlighted and the name appears at the bottom of your screen (you may not find one, as not all bases have the access required). These are automated centres of trade scattered throughout the sector. They are state run and standardised, although prices are set locally by demand.

When the Exchange was first standardised, 15 years ago, it was heavily regulated under Governor Meshach's orders. Costs were standardised and all transactions required Merchant's Guild approval. The Guild was a part of the Commerce Department at that time. Then changes came ... the Meshach administration fell due to the sale of Talons to the Church of Man. In the ensuing political vacuum, base leaders did away with the regulations and fully automated the Exchange.

Now, a decade and half later, prices have come down and profit is had trading from base to base. The only caveat is that, while you may be able to buy and sell slaves or drugs, they are not legal. If militia or Confeds scan your ship en route and discover contraband, you will be considered a trafficker and summarily attacked. Also, New Constantinople and Perry Naval Base forbid the sale of contraband through their Commodity Exchange.

There are many ways to make a profit through a trade. Buying grain at an agricultural planet, selling it at a mining base, buying ore at the base, selling it to a refinery, buying the refinery's plastics, and selling them back at the agricultural world is just one obvious example of a lucrative trade route. The expansion of privatised trade also opens up private interest in keeping the trade routes clear of pirates and Kilrathi. An active and healthy Commodity Exchange spells profit for you more mercenary types as well as for the haulers of cargo. (To buy or sell more items per click, hold down the **SHIFT** key.)

Slavery

The ongoing war with the Kilrathi has resulted in the unfortunate breakdown of civilization including law and order in many sectors. This has led to the rise in trade of illegal practices including piracy and the trade and transport of contraband. Perhaps the worst, though, is the enslavement of sentient creatures, combining the worst of all practices.

Being a passenger on an interstellar transport, or indeed just a pilot in your own ship can be fraught with danger. All passengers, colonists and pilots run the risk of being forced into slave pods.

Ship Dealer

Welcome to the Ship Dealer. To buy upgrades, weapons or a new ship, you must have access to a Ship Dealer. Locate the Ship Dealer by moving your mouse cursor around the Concourse until it is highlighted and the name appears at the bottom of your screen (you may not find one, as not all bases have one). Click **Left Mouse Button (LMB)** to enter the Showroom where you look at the shipdealer itself and three major civilian ship types. Here you can talk with the shipdealer to buy a ship, therefore select a ship with your mouse cursor and use the **LMB** then listen what the shipdealer has to tell you about it. Access the Upgrades Booth (p26) by clicking on the hallway. Return to the Concourse by clicking on the archways beside the hallway.

Showroom

In Privateer, not every ship (and not every pilot) is the same. Whether you're a rookie pilot just starting out; a merchant in need of a large cargo vessel; or a bounty hunter after a high performance fighter, everyone at some point wants to replace their current ship with something better.

The Showroom allows the player to access all of the various ships available within Privateer. Light to heavy ships, produced by all the shipyards of all the various factions may be available - for a price.

Not all dealers stock all available ships. Also, your reputation with both the manufacturer and the base you are docked with may influence availability.

Purchasing a New Ship

Select one of the three ships you see in the Showroom and click on it. The shipdealer will immediately start to tell you something about it and offers you the possibility to buy it or abort the purchase.

Upgrades Booth

The Upgrades Booth allows the player to access, view, buy and sell any and all upgrades capable of being placed on a ship. From attaching extra navigational aids such as afterburners or thrusters, to more powerful reactors, shields and weapons, if you have the credit, the dealer (may) have the upgrade.

Ship Modification is as simple as using a monitor. Use the buttons at the bottom of the screen to select Buy or Sell mode. Using the arrows at the sides, you can scroll through the available items. When you find an item you are interested in, simply touch the screen to indicate your selection.

Please note: You are not allowed to purchase missiles or torpedoes without a launcher. This constitutes intent to sell and is strictly prohibited. Should you decide to sell a launcher that still has missiles or torpedoes allocated to it, the ammunition automatically sells at the going rate. Always buy ammunition last and sell it first.

Software Booth

The other useful department in a dealership is the Software Booth. This is where you acquire such essential equipment as maps and scanners. Both are imperative. It seems that this is one of the areas that was too rapidly deregulated. Without a map you may as well be flying blind. In over seven hundred years of space travel this is only the second time we have allowed pilots to fly about with no navigational software. While the manufacture of scanners is competitive (there are three brands each with their own high and low end models), maps are not. Scanners are important, maps are essential. Spend your money wisely.

This listing should give you some sense of the recovery Gemini is making since the lifting of martial law. We are on the economic upswing. This is a sector of opportunity, a frontier for the risk takers of the Confederation. Your contribution is an important part of making us an immovable fortress on the Kilrathi border and a growth-oriented, prosperous community.

Commonly Available Ships

There are four basic models of single-person ship available to the general public: the Tarsus, Centurion, Galaxy and Orion. Recently I went to several dealerships posing as a naïve newcomer to Gemini and asked which ship was right for me. The salesman pitched his poor little heart out and managed not to tell me a thing. The best way for you to make the right choice is to be well informed. If you run across a hostile pilot flying one of these vessels, it also serves you well to be familiar with the advantages and drawbacks of each ship. Below are my impressions of each vehicle, followed by the latest statistics available and its probable loadout if you encounter it in hostile action. The popularity of these four ships makes it easy to obtain parts and service through any dealership.

Max. Velocity/Afterburner Velocity. Ship velocities are expressed in kps. These numbers are always computed relative to a stationary object near the ship, e.g. a nearby planet.

Acceleration. Ratings for ship acceleration range from Poor and Average to Good, Very Good and Excellent.

Max YPR (Maximum Yaw, Pitch, Roll). Yaw describes the ability of a ship to turn to the right or left. Pitch refers to up and down movement. Roll measures the ability of a ship to spin on its long axis. The ratings for YPR range from Poor and Average to Good, Very Good and Excellent.

Armour. The measurement of the ship's defensive armour is expressed in centimetres thickness of Durasteel (centimetres equivalent). The higher the number, the more effective the armour.

TARSUS

The mainstay of the Exploratory Services fleet just a few years ago, these steady craft are now a familiar part of private enterprise. The Tarsus has been discontinued. We list it here because of its popularity and general availability in the used markets.

Cockpit. Low visibility, especially through the small side windows. Cockpit placement prevents any over-the-shoulder view. Offers one MFD along with standard radar and armour displays (see illustration, p. 12). Comfort is comparable to the Orion but claustrophobic by comparison with the other two models reviewed here.

Speed/Manoeuvrability. Sluggish in turns and rolls. Can upgrade to Level 1 engine.

Ordnance/Protection. No slots available for turrets. Supports up to Level 2 shield upgrades. Two gun racks and two weapon or tractor beam racks.

Overall Performance Rating. I would give it a B in peacetime. With the war so close and the rise of piracy, I have to downgrade my rating to a D. Longevity in Gemini is worth the extra expense of purchasing a better ship or paying for protection.

Class	Merchant Scout
Max. Velocity	300 kps
Afterburner Velocity	600 kps
Acceleration	Average
Max. YPR	Average
Weapons	Mass Drivers (2), DF Missiles (3)
Cargo Hold	100 units (150 with cargo expansion)
Armour	
Sides	8 cm equiv. each
Fore	10 cm equiv.
Aft	10 cm equiv.

CENTURION

This is the workhorse of the mercenary community. The Centurion is a heavy fighter with the ability to do almost any gun-for-hire work. The limited cargo hold can contain more than an overnight bag but not by much. This is a ship for those pilots who love to fly, but it won't make you a living on the trade circuit.

Cockpit. High visibility. The dome cockpit of this single-seater affords the pilot a clear view of his target. Ride is comfortable at high speeds and in tight turns. It has one MFD, along with standard armour and radar displays (see illustration). Instrument placement is intuitive and easy to read; overall design is highly ergonomic.

Speed/Manoeuvrability. I've been very impressed with the roll rate of the Centurion, although light fighters such as the Talon easily out manoeuvre it. For a fighter of its class, this ship offers clean tight flight dynamics. Supports engine upgrades through Level 3.

Ordinance/Protection. A rear turret is a popular option for this ship. It supports up to Level 3 shield upgrades. There are slots for four guns and three weapons or tractor beams, even without a turret.

Overall Performance Rating. For the mercenary community this ship earns an "A" while those with more mercantile ambitions find its small cargo hold, and inability to support a cargo hold expansion a definite turn off. Consider your needs before investing.

Class	Bounty Hunter Heavy Fighter
Max. Velocity	500 kps
Afterburner Velocity	1000 kps
Acceleration	Excellent
Max. YPR	Good
Weapons	Mass Drivers (2), Tachyon Cannon (1), Particle Cannon (1), FF Missiles (2), IR Missiles (2), Tractor Beam (1), Turreted Mass Drivers (2)
Cargo Hold	50 units (75 with cargo expansion)
Armour	
Sides	15 cm equiv. each
Fore	20 cm equiv.
Aft	15 cm equiv.

GALAXY

A versatile merchant's vessel, the Galaxy is perfect for those with an entrepreneurial spirit. She is by no means a military vessel, but a Galaxy can usually protect herself and the large amount of cargo she's able to carry.

Cockpit. This large, roomy cockpit offers decent visibility despite the bulky ship behind it. Some pilots may take a while to adjust to the limited HUD area. Unlike most modern ships, the Galaxy's HUD is not built into the main window. Instead, it is suspended above the MFDs in front of the window. Dual MFDs have been standard since the 2669 model and are a popular feature (see illustration). All displays are conveniently placed for ease of use.

Speed/Manoeuvrability. Supports up to a Level 3 engine upgrade. For a ship of its bulk, the Galaxy is extremely manoeuvrable, although not as fast as we would have hoped.

Ordinance/Protection. Due to the large size of this ship, it is able to support both top and bottom turrets. Shield Level 3 is the maximum supported by the Galaxy. Without turrets, there are slots for only two guns and two weapons or tractor beams.

Overall Rating. The Galaxy is successful in its role as the top-of-the-line mercantile vessel available to the public. I give it an A without reservation. Trigger-happy pilots are a little disappointed in its moderate top speed, but the availability of two turrets adds a comfortable measure of safety.

Class	Merchant Ship
Max. Velocity	300 kps
Afterburner Velocity	750 kps
Acceleration	Average
Max. YPR	Average
Weapons	Mass Drivers (2), DF Missiles (3), HS Missiles (4), Turreted Mass Drivers (4)
Cargo Hold	150 units (225 with cargo expansion)
Armour	
Sides	17.5 cm equiv. each
Fore	25 cm equiv.
Aft	20 cm equiv.

ORION

The Orion is perhaps the safest of all the vehicles mentioned here. It can carry the most armour and shields of all the ships listed (at the expense of its manoeuvrability). This is a sturdy ship, designed to last.

Cockpit. Low visibility. The cockpit is dark and somewhat cramped, with less window area than the Tarsus. Dual MFDs are standard and easy to use (see illustration). Instruments are not as easy to use as in the Centurion, but are simple to get a handle on.

Speed/Manoeuvrability. Supports up to a Level 5 engine upgrade. Although the Orion has better than average speed, it's difficult to pull through tight turns.

Ordinance/Protection. Supports addition of a rear turret. Even without the turret, there is room for two guns and one weapon or tractor beam. With Level 5 engine upgrades, there is no reason not to pick a high quality gun with a high energy drain. Supports up to shield upgrade Level 5.

Overall Rating. Due to its low manoeuvrability, limited cargo hold, and the expense of outfitting it, I give the Orion a low B. With enough money, though, you can make this ship a high A. I highly recommend the full option package for this ship.

Class	Mercenary Gunship
Max. Velocity	350 kps
Afterburners	800 kps
Acceleration	Average
Max. YPR	Poor
Weapons	Mass Drivers (2), HS Missiles (3), Turreted Lasers (2)
Cargo Hold	50 units (75 with cargo expansion)
Armour	
Sides	35 cm equiv. each
Fore	48 cm equiv.
Aft	50 cm equiv.

OTHER SPACECRAFT

You encounter a wide variety of ships in the Gemini Sector, covering a whole gamut of designs and functions. Many of the hostile forces operating in this sector fly just one type of vessel and thus are recognisable by the design of their spacecraft. A thorough familiarity with the most common vessels in Gemini provides you with a distinct advantage in combat. Knowing what the advantages and the drawbacks of each ship are allows you to devise a sound combat strategy and greatly increases your chances of survival.

BROADSWORD

Class	Confederation	Heavy Fighter
Max. Velocity		350 kps
Afterburner Velocity		n/a
Acceleration		Average
Max. YPR		Average
Weapons		Mass Drivers (3), FF Missiles (6), HS Missiles (3)
Turreted		Lasers (2), Turreted Particle Cannon (2)
Armour		
Sides		17.5 cm equiv. each
Fore		25 cm equiv.
Aft		20 cm equiv.

The Broadsword is a commonly encountered Confederation fighter. It is equipped with a deadly array of blasters and several HS and FF missiles, which pose a severe threat to any enemy that ventures to cross its path. The Broadsword's main weaknesses lie in its slow speed, low manoeuvrability and limited acceleration powers. If you are flying a very manoeuvrable ship in an encounter with this vessel, the odds are definitely in your favour. A side attack on the weaker port and starboard armour is advisable.

DEMON

Class		Bounty Hunter Light Fighter
Max.		Velocity 450 kps
Afterburner Velocity		1200 kps
Acceleration	Very	Good
Max. YPR		Good
Weapons		Lasers (2), Meson Blasters (2), HS Missiles (2), Torpedoes (10)
Armour		
Sides		9 cm equiv. each
Fore		14 cm equiv.
Aft		12 cm equiv.

The Demon combines high velocities and powerful acceleration powers with a wide array of deadly weapons. Its torpedo loadout can even take out capital ships like the Kamekh or Paradigm with relative ease. If you are forced to fight the Demon in a close dogfight, try to make a side attack on that location's weak armour.

DRALTHI

Class	Kilrathi Light Fighter
Max. Velocity	400 kps
Afterburner Velocity	1000 kps
Acceleration	Excellent
Max. YPR	Excellent
Weapons	Lasers (3), DF Missiles (3)
Armour	
Sides	12 cm equiv. each
Fore	15 cm equiv.
Aft	13.5 cm equiv.

Most Kilrathi fighters emphasise high velocity and manoeuvrability, since a majority of all Kilrathi pilots rely on aggressive combat strategies. Similar to the Gothri, the Dralhti is designed in precisely this manner. Excellent acceleration powers, powerful afterburners and high velocities allow a Kilrathi pilot to close in on his kill quickly and efficiently. When confronted with the Dralhti, keep in mind that this ship's blaster loadout is relatively weak. Even though the Dralhti carries several missiles, Dumb Fires are more easily avoided than guided missile systems.

DRAYMAN

Class	Merchant Ship
Max. Velocity	150 kps
Afterburner	Velocity n/a
Acceleration	Poor
Max. YPR	Poor
Weapons	Meson Blasters (2)
Armour	
Sides	28 cm equiv. each
Fore	35 cm equiv.
Aft	30 cm equiv.

The Drayman is one of the most basic merchant ships you are likely to encounter in the Gemini Sector. This spacecraft is suitable for carrying cargo, but it is also extremely vulnerable to any attack. With poor acceleration, slow max. velocity and no afterburner power, this vessel can hardly hope to evade any predator eager to take over some cargo. Weak shields and a light weapons loadout make the Drayman a bad choice if you are traversing unknown or hostile territory.

GLADIUS

Class	Militia Light Fighter
Max. Velocity	400 kps
Afterburner Velocity	1000 kps
Acceleration	Very Good
Max. YPR	Good
Weapons	Lasers (2), Particle Cannon (1), HS Missiles (2), Torpedoes (8)
Armour	
Sides	8 cm equiv. each
Fore	14 cm equiv.
Aft	10 cm equiv.

The Gladius combines good velocity and acceleration with an effective and varied array of weapons. Its torpedoes make it an effective fighter for combat against capital ships. With its fairly strong blaster loadout and HS missiles, the Gladius is a versatile dog fighting spacecraft. Due to its manoeuvrability, it is hard to target the one accurately, but just a few on-target hits can down the Gladius because of its weak shields.

GOTHRI

Class	Kilrathi Fighter
Max. Velocity	450 kps
Afterburner Velocity	1200 kps
Acceleration	Very Good
Max. YPR	Good
Weapons	Mass Drivers (2), Particle Cannon (2), FF Missile (1), Turreted, Laser (1), DF Missile (1), IR Missiles (3), Turreted Meson Blaster (1)
Armour	
Sides	15 cm equiv. each
Fore	17.5 cm equiv.
Aft	17.5 cm equiv.

The Kilrathi Gothri can pose a very real threat to any ship in the Gemini Sector. With its impressive acceleration, it can reach high velocities. When you are facing a Gothri in combat, you should concentrate on its weak armour. A few well-placed concentrated bursts of gunfire can severely damage this fighter. However, it is not that easy to close on it. The Gothri is very manoeuvrable and can easily down you first with its array of blasters.

KAMEKH

Class	Kilrathi Capital Ship
Max. Velocity	300 kps
Afterburner	Velocity n/a
Acceleration	Poor
Max. YPR	Poor
Weapons	IR Missiles (2), HS Missile (1), DF Missiles (10), Ionic Pulse, Cannon (1), Meson Blasters (2), Tachyon Cannon (2), Turreted, Lasers (4), Turreted Plasma Cannon (2)
Armour	
Sides	55 cm equiv. each
Fore	70 cm equiv.
Aft	40 cm equiv.

If you are flying missions in the Clarke Quadrant, you are apt to encounter the Kamekh sooner or later. This imposing capital ship with its strong armour and heavy weapons loadout is one of the most impressively designed spacecraft in the Gemini Sector. The Kamekh is not only equipped with a sophisticated arsenal of guns ranging from meson blasters to plasma cannon, but it can also effectively down enemy ships with its multiple missiles. Refer to Survival Tips for effective attack strategies in combat situations with capital ships.

PARADIGM

Class	Confederation Capital Ship
Max. Velocity	200 kps
Afterburner Velocity	n/a
Acceleration	Poor
Max. YPR	Poor
Weapons	Meson Blasters (2), Tachyon Cannon (2), Ionic Pulse Cannon (1), Turreted Lasers (3), Turreted Mass Drivers (3), DF Missiles (10), IR Missiles (2), HS Missile (1)
Armour	
Sides	65 cm equiv. each
Front	80 cm equiv.
Rear	50 cm equiv.

The Paradigm is one of the Confederations most advanced destroyers. Featuring almost impregnable armour and shields, it more than compensates for its lack of speed and manoeuvrability. The Paradigm also has a deadly array of weapons at its disposal, making an attack of any sort extremely dangerous. It carries an astonishing variety of blasters, ranging from meson blasters to ionic pulse cannon. Multiple missiles can deter even the most aggressive Kilrathi aces.

STILETTO

Class	Confederation Light Fighter
Max. Velocity	500 kps
Afterburner Velocity	1400 kps
Acceleration	Excellent
Max. YPR	Excellent
Weapons	Mass Drivers (2), HS Missiles (2)
Armour	
Sides	7 cm equiv. each
Fore	9 cm equiv.
Aft	8 cm equiv.

The Stiletto is the fastest ship in the Confederation fleet. With an afterburner velocity of 1400 kps and excellent manoeuvrability, it can evade even the swiftest Kilrathi fighters. The Stiletto's weakness lies in its extremely flimsy armour and relatively light weapons loadout. If you encounter an experienced pilot in a Stiletto, however, you should prepare for gruelling combat because his high manoeuvrability lets him get uncomfortably close.

TALON

Class	Light Fighter (used by militia, Church of Man, pirates)
Max. Velocity	400 kps
Afterburner Velocity	1000 kps
Acceleration Very	Good
Max. YPR	Good
Weapons	Mass Drivers (2), Particle Cannon (1), HS Missiles (2)
Armour	
Sides	8 cm equiv. each
Fore	10 cm equiv.
Aft	9 cm equiv.

The Talon is probably the ship you will encounter most often in Gemini. Flown by numerous different factions, it may appear in slightly different designs but its weapon loadouts and dynamics remain the same. You should take extreme care to keep the Talon away from your rear, since it is equipped with numerous HS missiles. If you are an accomplished pilot, you should be able to take out a Talon with relative ease, especially if you are flying a Stiletto or a Centurion, since its armour is extremely weak. Try to avoid its particle cannon, since a hit can inflict sizeable damage.

Customizing your Ship

Once you've bought the ship that is right for you, you are ready to buy the accessories that make the ship truly your own. Whether this is your first time outfitting a ship or you're an old pro who wants all the latest numbers, this section is for you. I have broken down the vital statistics of each non-standard item and listed them alphabetically. Guns are listed with other weapons, at the end of the section.

This listing is meant as an aid to your purchasing the best equipment you can afford in the least amount of time. Review your needs, finances and what's available, and you should end up with the ideal vehicle for fun and profit. If only I'd had this kind of information available when I outfitted my first ship ...

AFTERBURNER

Afterburners more than double your speed and can mean the difference between life and death in asteroid fields and combat. As they are relatively inexpensive, I highly recommend buying afterburners, especially if you are flying one of Gemini's slower ships.

ARMOUR

There are two types of armour available. Both are repairable if damaged and offer significant protection. Most ship's hulls are built to keep you pressurised and immune from radiation, but they do not do much to stop a mass driver. If you can afford an escort, you may not need armour, but other protection is much less reliable.

Plasteel. Protective equivalent: 10 cm durasteel. Plasteel is the least expensive armour and protects one from the equivalent of four direct laser hits.

Tungsten. Protective equivalent: 20 cm durasteel. Tungsten armour may cost a little more but can stop up to two torpedoes. If you are a courier in Potter Quadrant, working for bureaucrats, you probably don't need this level of protection. As you are clearly a reader of our humble little journal, you are more likely a risk taker who runs guns out to the edge of the Kilrathi border and therefore need all the protection you can get. I recommend you not pinch millicredits and spend the extra necessary to get tungsten armour.

CARGO EXPANSION

Volume: varies by ship. Not every ship can support an internal cargo expansion — check with your ship's manual before purchasing a cargo expansion. These tend to pay for themselves quickly with the additional profits gained from all that extra cargo.

ECM PACKAGES

Electronic Counter Measures come in three levels, each working to prevent missile locks. (Note that even if they break the lock, they do not prevent missiles from flying straight and hitting you.) In our testing, Level 1 ECM only had about a 25% success rate in breaking a missile lock. Each upgrade seemed to improve the success rate by another 25%.

ENGINE UPGRADES

There are five levels of engine upgrades. Each upgrade is a generator or series of generators that powers your guns and shields. Level 1 provides 180 gigawatts, with each level above that generating another 100 gigawatts each. It is our recommendation that you have at least one more level of engine upgrade than levels of shield. Power drain is an important concern that is answered with a sufficient level of generator. Also be aware that the ship you are in may not be able to support as many engine upgrades as you would like. Buy your guns and shields with this in mind.

JUMP DRIVE

This is undoubtedly one of your most important and expensive purchases. Unfortunately, one manufacturer essentially has a monopoly on jump drives (a common problem with many frontier products). The jump drive is your ticket to interstellar travel. Without it you are unable to travel beyond the system you buy your ship in. All of Gemini's trade, strategic position and illicit industry depend upon jump drives. Jump fuel is automatically topped up as part of your landing fees, so it's just the initial investment that hurts. However, like a cargo expansion, this is an investment that more than pays for itself.

NAV MAPS

Gemini's ship dealers have conspired at highway robbery. They require that you buy nav maps at an additional charge. Nav maps are critical to survival as a pilot. Without one you cannot autopilot, you cannot get a directional marker on your HUD, and you cannot obtain any immediate information about the quadrant you are in. If you were to jump from a quadrant for which you have a map into one with no map available, I recommend you jump right back. If you cannot afford to get the Gemini Sector map with all four quadrants, at least get the map of your current quadrant. Fortunately, the All Quadrant package is sold at a discount.

REPAIR DROID

While the grizzled old pilots in mining base bars swear only by their own hands, I have seen a repair droid bring a badly damaged ship back from near death. These little gadgets are extremely effective if you just can't wait to land and pay to get your damaged systems repaired.

SCANNERS

The scanner provides you with radar, target information, friend-or-foe HUD targeting and a target camera. There are three brands, each with a different display and each with its own advantages. Below are the statistics for each level of scanner, listed by brand name. All have a range of 35,000 K, and all have HUD brackets. In general, the brands are comparable except at the high end, in which the B&S Omni is clearly the superior (and costliest) choice.

Iris Basic radar (all).

Mk I 5% chance per second of identifying target.

Mk II Target lock. 15% chance per second of identifying target.

Mk III Target lock. ITTS. 25% chance per second of identifying target.

Hunter AW Friend-or-Foe colour-coded radar (all).

6 5% chance per second of identifying target.

6i Target lock. 15% chance per second of identifying target.

Infinity Target lock. ITTS. 25% chance per second of identifying target.

B & S Fully colour-coded radar (all).

Tripwire 15% chance per second of identifying target.

E.Y.E. Target lock. 25% chance per second of identifying target.

Omni Target lock. ITTS. 35% chance per second of identifying target.

SHIELD GENERATORS

There are five levels of shield. Not all are available for every ship. Each uses 100 gigawatts and provides the equivalent of 100 cm of durasteel protective value. Be sure you have enough power to generate any shields you purchase. If other systems need power, you can divert power from your shields by turning them off or, if they are strong enough, decreasing their power by steps.

TRACTOR BEAM

A tractor beam is the key to efficient salvage. Cargo is usually found after a battle, waiting for collection. Items collected are automatically added to your manifest. The energy drain is 4 GJ/second.

TURRETS

There are three types of turrets: top, bottom, and rear. Availability depends upon the type of ship you are flying. All turrets have room for two guns and a tractor beam. While they come with an MFD for targeting and ordnance, they have no radar.

WEAPONS

Guns. For many pilots in Gemini, this is the most important purchase you make after your ship. Guns are listed here in order from least to most expensive. Be careful to balance the energy use with the engine upgrade available. Shields and guns combined can leave you powerless and vulnerable. Check to make sure you are getting the most power for your credits and that you optimise your energy use. Buying a gun you haven't got the juice to fire is a painful experience. The velocity listed is the ammunition speed when shot from a stationary craft. Refire delay is the shortest time in which the gun can recharge for the next shot. Energy use is the amount of energy, in Gigajoules, used by each gun per shot. Armour penetration is based on the durasteel standard, and is listed only for comparison.

Laser Velocity 1400 kps
Refire delay 0.3 seconds
Energy use 4 GJ
Armour penetration 1.8 cm

Mass Driver Velocity 1100 kps
Refire delay 0.6 seconds
Energy use 6 GJ
Armour penetration 2.6 cm

Meson Blaster Velocity 1300 kps
Refire Delay 0.4 seconds
Energy Use 8 GJ
Armour Penetration 3.2 cm

Neutron Gun Velocity 900 kps
Refire Delay 0.65 seconds
Energy Use 18 GJ
Armour Penetration 6.2 cm

Particle Cannon Velocity 1000 kps
Refire Delay 0.6 seconds
Energy Use 11 GJ
Armour Penetration 4.3 cm

Tachyon Cannon Velocity 1250 kps
Refire Delay 0.4 seconds
Energy Use 8 GJ
Armour Penetration 5.0 cm

Ionic Pulse C. Velocity 1200 kps
 Refire Delay 0.7 seconds
 Energy Use 15 GJ
 Armour Penetration 5.4 cm

Plasma Gun Velocity 840 kps
 Refire Delay 0.8 seconds
 Energy Use 22 GJ
 Armour Penetration 7.2 cm

Missile Launcher

Missile launchers are crucial in making a quick kill. Without shields few ships can withstand a missile hit. Missiles are listed in order, from least to most expensive, with a brief description of its locking method. Each launcher can hold up to 10 missiles in any combination. Armour penetration is based on the durasteel standard, and is listed only for comparison. All missiles that can lock but fail to do so simply fly straight ahead (like a DF missile). Refire delay for one launcher is 2.5 seconds — two launchers are twice as fast.

Dumb Fire (DF)

Lock None (fires straight).
Speed 1000 kps
Armour penetration 13 cm

Heat Seeker (HS)

Lock Locks onto engines of target; most effective if behind target.
Speed 800 kps
Armour Penetration 16 cm

Image Recognition (IR)

Lock Locks onto shape of target; effective from any angle.
Speed 850 kps
Armour Penetration 17 cm

Friend or Foe (FF)

Lock Locks onto nearest hostile ship (or nearest ship not transmitting friendly signal).
Speed 900 kps
Armour Penetration 17 cm

Torpedo Launcher

Torpedo launchers have only one type of ammunition and can hold a maximum of 10 proton torpedoes. Refire delay is 0.5 seconds.

Proton Torpedo

Speed 1200 kps
Armour penetration 20 cm

The Guilds

The guilds have been a political force since medieval times, originally formed to provide societies of like minded individuals with mutual fellowship, protection from undue influence, wielding of political clout and above all the enforcement of certain levels of performance by members. The guilds of today still follow these same basic tenets, and there are two guilds that are of particular interest to all pilots: the Mercenaries and Merchants Guilds.

Mercenaries Guild

For a reasonable membership fee, pilots are able to take a variety of jobs cleared by the Guild. This means no missions are illegal and payment is guaranteed. They also guarantee their clients that all guildsmen are registered and can therefore be tracked and penalized for indiscretions. Any one individual may not have more than three missions accepted at any one time in order to prevent racketeering or simply over-committing out of ambition. All members have access to mission listings at any Guild office and are paid as soon as mission requirements are fulfilled. Reporting to an office is not necessary.

Merchants Guild

The Merchants' Guild has, in the last decade, established good relations with the Mercenaries' Guild. They realized that there is really no competition between them. In fact, each depends upon the other. This is especially true as the supply of pilots increases. With the war effort and the heavy campaign to advertise Gemini's opportunities abroad, there has been an upsurge in prospectors panning for golden opportunities. This has led to more small businesses depending on the lone pilot to transport their wares and protect their flight paths. Not surprisingly, the guild has managed to keep its share of the moneys involved and has almost too nice offices.

Accessing the Guilds

Accessing the guilds is a matter of highlighting their respective offices on the Concourse and clicking on them. Please note the guilds are honorable societies and do not allow maintenance of offices on pirate bases.

Once inside the office, clicking on the person at the desk results in a spiel about the relevant office and the services provided. Should you be interested, they then request a joining fee to be paid by you to access their computer for missions. Click on **Accept/Reject** as appropriate.

While you are a member of the guild, you may access their computer repository. Click on the computer located on top the front desk. This accesses the Computer Screen. A series of computer disks represent various missions on offer by the guild. Information on the mission, including objectives and reward are shown on the screen itself. To accept a mission, click on the screen, otherwise you may click on another disk to select another mission, or leave the screen by clicking on anywhere on the edge.

The Bar

A greater hive of villainy, danger and iniquity you will never find than the local bar. Whether gambling den, tavern, fest hall or respectable dining establishment, most characters in Privateer will at one stage or another be found, having a drink and soaking up the ambience.

Maybe they're watching to see who else walks through the door... maybe watching you. Are they just acknowledging a fellow denizen of the universe, wanting to have a general conversation with you, hire you for a 'special' mission ... or are they watching for a reason more sinister?

In Privateer, the Bar, found in most bases in the known universe, represents such establishments. While stepping in here to have a drink, you can chat with the bar attendant, catch up on the latest holo-vid news, and look into accepting specialized missions from fixers.

Barkeeper

Chatting with the local barkeeper allows the player to obtain knowledge of local news, flying tips and occasional bits of valuable knowledge. While most conversation is designed to draw you into staying longer (and drinking more), there are the rare conversations where the bar attendant will let slip some important knowledge about goings on, potential money sources and similar valuable information. Don't discount talking while in your cups!

To chat with the bar attendant, highlight the attendant and click.

Fixers

While you're in the bar, check out who's seated at the tables. People of all walks of life may want to talk to you. Click on them to hear what they say. If you're interested in what they propose, indicate your decision by clicking the appropriate response.

Fixers are representatives of the various Privateer factions with whom it may be profitable for you to converse. For more information on fixers, refer to the heading **In Game Missions** on page 20.

IN FLIGHT STATUS CHECK

Basic Flight Training

... In training with Lieutenant Mark Thornton...

(Background, low volume) "What makes you think that these wet behind the ears can learn anything? Do you really think they have the b-" *(sounds of interference erupt from your PAD)* "to be able to pilot a craft ... what? We're live?"

(Full volume speech) "Greetings, pilots! I've been requested by the control authority to provide some pointers for rookie pilots on how to fly their brand spanking new spacecraft. The good thing is that no matter what craft you're flying - whether a Tarsus, Orion, Galaxy, Centurion or whatever - your interaction with the flight controls is the same. Now, many rookies love to jump in, start moving, and figure out the controls as they go. That's fine, and I'll listen to your space debris hitting my shields when I pass your frozen corpse. The smarter pilots learn their controls beforehand, as that half-second difference in flight control manipulation could mean becoming a smear on the side of a station, or a twisted hulk after tangling with the Kilrathi.

"Now, first things first. How do you move? If you want to change your direction of movement, you need some sort of flight instrument to relay your commands. Let's refer to your instrument documentation -" *(low volume mutter, as though to someone beside him)* "they DID get that didn't they?" *(Full volume)* "There are three forms of flight control: joystick; mouse and keyboard. The joystick is pretty self-explanatory. Push the joystick forward, and your ship's nose points 'down'. Pull back and you point up. What? Yes, yes you can invert the controls if you want. Push the joystick from side to side, and your craft will turn on the vertical axis. Some advanced joysticks will even let you roll if you can configure your ship correctly. Now, your mouse does the same job in two ways. First, we have mouse warping. That's where moving your mouse in a direction, moves your ship in that direction. Keep moving your mouse - yep, that's right - and your ship keeps turning. Mouse gliding, on the other hand, means that moving your mouse pointer away from the center moves your ship in the direction of the pointer." *(Low mutter)* "Me, if I don't have my joystick in my hand, I prefer to glide." *(Full voice)* "Lastly, you have the keyboard. Both the joystick and mouse imitate the keyboard. Use your **cursor keys** to move up, down, and sideways, **Insert** and **Delete** keys to roll left and right. You can also use the keypad to do the same thing: **KP8**, **KP2**, **KP4**, **KP6** and **KP/**, **KP*** to roll.

"OK, so now we're spinning around, going nowhere. What we need is thrust - can the laughter you lot up the back! To move anywhere, we need to have velocity. Velocity is determined as relative to the current system's sun. Use the equal = or **KP+** and minus - or **KP-** keys to alter your velocity respectively. Notice that you can have forward and reverse velocity. To obtain maximum combat velocity, use the backslash \ key, and the **BACKSPACE** key reduces velocity to zero. Essentially, these commands provide a **Requested Velocity Vector**, otherwise called a 'set' velocity or speed that your craft will always try to move at. At times, like when turning, your velocity may vary up or down, but your craft will always try to return to this Requested Velocity Vector. The other modes will be discussed in a later lecture.

"That's enough for now. You've probably heard enough of this old f- I know, I know, no swearing. Have a think about what I've just said - it just might mean that I'm NOT hearing your space dust on my shields."

Advanced Flight Techniques

... Fade in on Lieutenant Mark Thornton...

(*Low volume*) "... and these nuts want to know more about how to kill themse-" (*full volume*) "Will someone please tell me when we're on?"

"Welcome back pilots! Since I see you're all here, I'd say everyone survived their first piloting experience? Fine, so let's learn about some more advanced flight techniques.

In the last lecture we learned about setting your velocity. Now there are a few ways that let us get around the set velocity limit. For those of us lucky enough" (*sotto voice*) "- rich enough -" (*full voice*) "to have an Afterburner, you can use the **TAB** key to activate it. Afterburner gives your craft a greater velocity than your maximum combat velocity alone. The downside is that you have to hold the key down to maintain your afterburner, and it is usable only while there is surplus energy available. Where you don't have an Afterburner, you can still use the **TAB** key to accelerate to your maximum set velocity, just like the = key. In this case, though, releasing the **TAB** will then reduce your velocity back to the 'set' original.

Now, all these flight commands deal with inertial movement. Most small craft can pull 10-20 gravities (G's) of acceleration or deceleration, and have a flight system designed to account for inertia. At combat velocities, your craft won't be going fast enough that you really notice the effects of inertia. Larger craft are not designed with large G's in mind, and the effects of inertia mean that changing direction or velocity requires a longer timeframe.

Inertial drift, however, can be a benefit. There's a name for it, the **Shelton Slide**. It actually works quite well in battle. This maneuver requires you to approach your target at high speed, and a little off center (i.e. not head on). When level with your target, quickly turn to face it while reducing your velocity. Your ship will continue in its prior direction until your computerized flight control can compensate for the change in direction. That brief period allows you to strafe the side of your opponent, often hitting the weaker side or rear armor.

The reason I mention it is that there is also a key, the tilde key ` that provides a controlled version of this drift. This command disengages the ship's flight systems from flight control - so your ship will not try and correct velocity or direction. While it doesn't give you six degrees of freedom of movement, you can spin around to face elsewhere while still moving in your original direction and velocity. This is definitely a handy maneuver in battle.

The next point I want to raise is Matching Velocity. Now this function also requires knowledge of targeting (p53); so I'll only touch on it briefly. Our calculation of velocity in space is determined relative to a single point in space, usually based on the local sun. At times, you may want to match the velocity of another point, say a ship - usually when docking or in combat. Using the **F9** key will match your velocity with your target. Your set velocity becomes zero relative to your target. Using the **F10** key resets velocity against the local sun.

What we've talked about so far are the settings you would have when flying around a base, station, planet, or when you're in combat - yes, I've heard you all boasting. We'll just see who turns up for your reunion, right?

Want to leave local space for another destination? Well, target your destination, and orient your ship to face it, then accelerate to your maximum velocity. Most pilots, however, get bored very quickly when nothing's happening nearby. So your ship is equipped with an automatic pilot. So long as there are no hazards or enemies nearby, your ship will fly itself and you can occupy yourself with other things. You only need to return to the cockpit when you arrive at your destination, or a hazard or enemy appears. Saves a lot of time. You can activate your autopilot when the Autopilot light is on by hitting the **a** or **A** key.

Well, that's it. You should also note that your instrument documentation has information on other key uses, but they're more specific and outside of the scope of my talk here. I hope at least some of you listened, it may well save your life someday."

(Sigh) "Someone give that fool up the back a kick to wake him up."

Matching Velocity

As the Lieutenant states above, a ship's velocity is relative to a point in space and measuring it in relation to the local sun has long since been accepted as standard. When matching against another object, however, the result is that the object you match velocity with essentially becomes the stationary pivot around which your own viewpoint will move. This function also assumes that the new object does not change velocity or direction. Understand too, that your velocity in relation to the local sun may well be quite high - this is the result of inertia and a changed point of view. As such, this function effectively modifies flight control.

To match velocity with a target, you must first lock onto it. You must then use the **F9** key to match velocity with your target. Your set velocity then becomes zero relative to that target, i.e. your '0' set velocity becomes the velocity of that ship. Use **F10** key to reset velocity against the local sun.

BACKSPACE (Set velocity to '0') will assure that your ship is stationary relative to the other star ship (unless it accelerates faster than you and is accelerating).

Docking Procedures

Docking is an integral function of playing Privateer. Without knowing how to dock, you can never interact with another base in the universe.

In order to dock at a location, you must first get there. How to target a base or planet, and how to fly there using normal navigation and autopilot are discussed elsewhere.

Continue traveling towards your destination when you are near a base or planet you can try to initiate the automatic docking process by flying closer to the planet or base. Now you will receive a message through your com system that you are entering an automatic landing zone, continue the course and your ship will dock.

Once docked, your screen will then change from the in-flight HUD (p49), to the Landing Pad (p17) interactive screen.

Autopilot

Autopilot shortens the transition time between two areas of interest when there are no identifiable hazards nearby, such as the presence of enemies or asteroid fields.

Where autopilot is available, the AUTOPILOT light in the cockpit activates. To use it, however, you must first select a destination. Use **n** or the starmap to browse through the available nav points and select a destination. Once a destination has been chosen, hitting **a** or **A** activates autopilot. Your cockpit viewpoint is replaced by a camera view panning around your ship, reverting back on arrival at your destination. Generally autopilot delivers you to within 15,000 meters of your destination, at which point you must manually fly the remaining distance. Pressing **a** multiple times with the same target will not transition any closer than 15,000 meters.

Autopilot may not activate as a result of the following:

- a) You are within 15,000 meters of a destination;
- b) a potentially hostile target (use **h** to browse units targeting you) is nearby; or
- c) you are near or within a hazard

If none of these scenarios applies, it may be that a hostile just died and your sensors are verifying the debris is inactive—wait around 10-20 seconds for the autopilot light to appear.

Jumping

For the history and theory of interstellar travel, jump drives and wormholes, please refer to scientific literature. Here, we discuss the basics and mechanics of how to travel between the stars.

To initiate interstellar travel, a ship must have a jump drive installed. Use your targeting keys or map screen to select a jump point and approach it as normal. Jump points appear as blue balls in space, indicating the sphere within which a jump drive may be activated. Once within the sphere, activate your jump drive by pressing **j**. Your cockpit displays a jump animation, which clears to reveal your destination system.

Final Note: your starting ship is not equipped with a jump drive at start of play. As such, you are only capable of in-system travel. You will need to acquire a jump drive to travel between the stars.

Take a Look Around You

Privateer allows you to look around your ship, and your local space. It does this in two ways: by providing a cockpit view and an outside camera position view. You may move from one view directly to another by pressing the appropriate key.

Cockpit View

Cockpit views are just that: from your pilot's seat, this is what you would see. These views represent looking through the front and side cockpit view-ports, and a looking over your shoulder.

Name	Key	Description
View Forward	[F1]	This view is what appears initially in flight and is otherwise known as the cockpit view. This view contains all the necessary information and displays to fly. While in view forward, pressing [F1] will change from the cockpit view (with cockpit struts) to the Heads Up Display (HUD (p49)). The HUD provides the same information as the forward view but removes the cockpit surround. Press the key once more to return to cockpit view.
View Left	[F2]	This view is looking through the cockpit <i>glass</i> over your left shoulder.
View Right	[F3]	This view is looking through the cockpit <i>glass</i> over your right shoulder.
View Reverse	[F4]	The pilot is looking over a shoulder to the rear of the cabin.

Camera View

A camera view is best described as a single viewpoint or eye located in one position in space. The Panning Camera's (F6 and F8) position is moveable. While in these views, use these keys **HOME**, **END**, **INSERT**, **DELETE** to move the camera position in the appropriate direction.

Panning Camera	[F6]	This view positions a camera at a single point in space, facing your ship. You may rotate the camera about your ship using the panning keys.
Target Camera	[F7]	This view places the camera at a location looking past your ship towards your current target.
Target Panning Camera	[F8]	This view positions a camera at a single point in space, facing your target. You may rotate the camera about your target using the panning keys.
Zoom View In	[F11]	While in one of the camera views, this function will move the viewpoint towards the object viewed.
Zoom View Out	[F12]	While in one of the camera views, this function will move the viewpoint towards the object viewed.
Target Camera	[V]	Display a 3 rd -person view of your targeted object in a Multi Function Display.
Screenshot	[i]	Takes a screenshot of your current view, removing any targeting brackets or docking clamps from the shot.

The Cockpit

The Cockpit View and Heads-Up Display (HUD) are the primary interfaces with Privateer while in flight. The individual areas of the Heads-Up Display are discussed below in clockwise order from the top left.

1. Multi-Function Display (MFD)

The Multi-Function Displays in each cockpit provide a wide range of information essential to flying successful missions. Some ships have only one MFD, but where there are multiple MFDs, different functions are displayed on alternating displays. Use **PGUP** or **PGDN** to scroll a selected screen.

- **Target Display e**: displays name or flight group, distance to and a 2D representation of your targeted object. If the object is a ship, it also displays a red coloration as the target takes damage, and shield strength with bars that reduce as shields collapse. Note that shields are oriented with the top shield being the front of your target, bottom shield the rear, and left and right sides as appropriate, irrespective of the orientation of the 2d representation.
- **Camera v**: toggles between four displays in the MFD (see p48 for explanation):
 1. Target Panning Camera;
 2. Target Camera;
 3. Chasescam;
 4. Target Display (above).
- **Communications c**: displays a list of potential communiqués you may make to your targeted object. A lower number is friendlier than a higher number.
- **Objectives o**: displays a list of current mission objectives.
- **Gun Display g/G**: displays your ship's currently installed weapons. Repeated use of **g** while in this display activates/deactivates selected weapons (**G** reverse order toggle).
- **Missile Display w/W**: displays your ship's currently installed missiles. Repeated use of **w** while in this display activates/deactivates selected missiles (**W** reverse order toggle).

- **Damage Display r:** displays your ship's components with a percentage rating of current operating efficiency. Components are also color coded to reflect damage severity at a glance. Also displays ECM systems when activated.
- **Cargo Manifest m:** displays your current cargo, any mission cargo, and upgrades that are stored in your cargo bay. You must be in this to control your ejected cargo, to enslave and to free slaves.
- **Deactivate Display O:** deactivates (blanks) the MFD.

2. Indicator Lights

Located at the Center Top are four indicator lights:

- The **FUEL** light indicates how much fuel remains for system jumps. A ship carries enough fuel for six (6) jumps before it must land and refuel. Refer to page 47 for more information.
- The **AUTOPILOT** light indicates whether autopilot can be activated. Refer to page 47 for more information.
- The **ENERGY BAR** indicates currently available reactor power for weapons, afterburner and ECM.

3. Targeting Reticule

In the center of the HUD is a crosshair. This indicates where your weapons are zeroed (i.e. focused to cross and cause the most damage). During combat, you will usually attempt to 'lead' your target, by aiming in front of their ship so that your shots arrive in the same location as your target will be.

When you have a targeted object in your front view-screen, that object will appear with an open square bracket surrounding it. Where you lock onto your target, the square will be solid. If you have missile lock on your target, a diamond will appear around the square. Lastly, where your ship is fitted with ITTS (p56), a small diamond will appear in front of your targeted object.

4. Velocity

- **SET Velocity Indicator:** This indicates the velocity your ship will travel without player intervention.
- **KPS Velocity Indicator:** This indicates the current velocity of your ship, taking into account afterburner use and changes in direction.

5. Radar

All detectable objects (ships, bases etc) are represented by dots on this display. Your currently targeted object will appear as a cross. On obtaining scanner upgrades, these dots may be color coded to reflect your reputation with the object. If the object is:

- directly ahead of you, the corresponding dot will appear in the center of the display;
- ahead but above or to the side, the dot will appear in the inner circle, in the four quadrants relating to the position of the target in relation to your ship; or
- to the rear, the dot appears in the outer rim of the display.

Lock: This indicator (not shown) indicates that an opponent has target and locked onto your ship.

6. Shields Display

This display is a representation of your ship's armor and shields.

- Shield strength is indicated by the outer set of indicators; it regenerates, and strength level may be set by the keys **s/S** to two and one third strength respectively.
- Armor strength is indicated by the inner set of indicators; it is finite and must be repaired at a base.

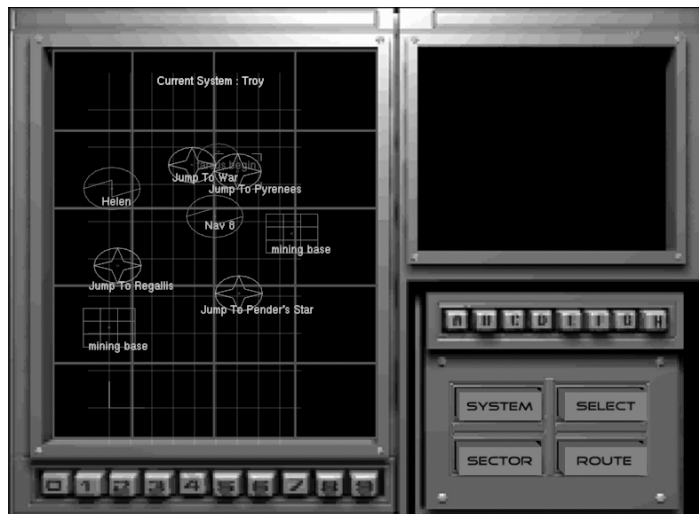

Should your ship take enough damage to reduce shields and destroy armor, your internal ship components will take damage, reflected in an increase in red color in the representation. Too much damage will result in ship destruction.

Navigation

Just as in ancient times, the ability to navigate required more than just seeing what was around you. Navigation also required accurate maps depicting locations over the horizon and dangers hidden away out of view. In spatial navigation, the importance of maps is magnified greatly, as sight alone is all too limited (one cannot usually see an orbital station from a planet's surface, let alone another planet).

Further still, while it is possible to navigate around a solar system using targeting data only, traveling from system to system in Privateer would be aimless wandering without adequate maps to provide navigational data. Finding a single system would be nearly impossible, without reference to a map of the stars.

The Nav Screen may only be activated while in-flight. The player should note that activation of the map screen does **NOT** pause the game. Flight controls still operate, opponents will continue to attack, and the game otherwise continues while viewing the Nav Screen.

The Nav Screen is activated/deactivated by pressing **SHIFT+m**. It appears superimposed over the cockpit view or HUD. It consists of a view-screen located on the left, and four activation buttons to the lower right.

Note that on re-activating the Nav Screen, whichever mode was last viewed is the one that appears.

To Select Object	= Click on object with Left Mouse Button (LMB) to select object or system.
To Rotate Map	= Click LMB & hold to rotate through x,y,z axes.
To Zoom	= Click and drag Middle Mouse Button
	= Scroll Wheel

Navigation Screen

The Navigation mode displays sector and system maps providing information on and locations of all planetary bodies, artificial satellites, bases, jump routes as well as known spacecraft, color coded by faction. Note that jump route lines between factions will reflect a half/half color from each faction.

- System - Displays a Map of your current System.
- Sector - Displays the known Gemini Sector Map.
- Select - You may select a destination system on the Sector Map and lock it in with this function key.
- Route - Used in the Sector Map, to show you the quickest route to your selected destination

Targeting

Targeting Keys

Name	Key	Description
All Targets	[t]	Switches through all Non-planetary/non-natural units (such as capships and fighters) in front of your ship.
Non-natural Targets	[u]	Switches through all targets in the current system.
Hostile Targets	[h]	Switches through all hostile (to you) targets in the current system.
Subunit Select	[b]	Switches through the sub-units of the ship you have currently selected.
Lock On Target	[l]	By pressing this key you can 'lock' your selection on the currently selected target.
Front Target	[y]	Pressing this key will pick the target closest to your crosshair. Tends to be used to target planets in front of you.
Target Display	[e]	Display current targeted object in 3D including damage and shield status in MFD.
Save Targets	[ALT+1-0]	Stores currently selected target to the chosen number.
Recall Target	[CTRL+1-0]	Recalls chosen target to the targeting screen (MFD).

Please note the **t,n,u** and **h** targeting features also work in reverse by using **SHIFT+key**.

One of the most useful shipboard abilities in Privateer is Targeting. While most pilots consider targeting as only useful in combat, in truth it is required to perform nearly all in-flight functions.

The ability to navigate, both in and out-system, requires a pilot to lock onto a navigation point (base, planet, sun, wormhole, ship etc). Communication requires you to lock onto a target, before selecting which communiqué you will give. Wingmen require you to target them before giving orders.

As such, learning how to target is an important skill, possibly making the difference between targeting and shooting your opponent before he does you, or, making an escape with your cargo intact and not becoming space debris.

Various keys allow the pilot to target different points of interest within a system. You can cycle through all available targets within a system. This is usually when you want to see what's out there. Unfortunately, cycling through all targets is a long process. As such, other targeting keys are more specific. You can cycle through all significant and/or neutral targets such as bases, planets and points of interest. You can narrow this further and only cycle through non-natural targets such as stations and ships. The most important for battle is the ability to cycle through targets hostile to you. You can also cycle through targets in reverse.

When targeted on large ships or stations, you can also cycle through their sub-units. Lastly, you can point your ship at an object and target it that way.

Once you have a target marked, you can lock your target indicator to that target. Wherever you are facing, or your target is, you can find them without having to hunt through all other targets in the system. This locking capability also allows any missiles or torpedoes carried to also lock onto your target.

Communication

Pilots don't just travel through a void in space. They must interact with a variety of ships, bases, stations and planets. While they can certainly interact - all weapons blazing - such a career is not likely to last long.

The ability to communicate with others in space opens up many options. You can say hello, engage in psychological battle with an opponent by using taunts, appeasing factions to repair reputations (by begging for mercy), or give a blood-curdling scream as your ship disintegrates around you...

The reactions of various factions may be influenced depending on your comms. If you choose particularly menacing taunts, your target may attack you instead of its current target. Likewise you can restore relationships with hostile people with friendly comms. Specific comms messages will be derived from your reputation with your target, as well as any previous conversations you have already had with them.

You can request permission to dock at bases. Doing this before actually docking may improve your reputation with that faction.

A word from the wise: when being scanned by militia, they will request that you not deviate from current course and speed. Should you do so, they will assume you are carrying contraband and act accordingly.

To communicate with others, you first need to target them. Once targeted, you may then choose what dialogue you will have. To see the types of dialogue, open your MFD to comms mode by cycling with the **c** key. This brings up a list of numbers corresponding to actual dialogue. Pressing the appropriate numbered key will transmit that message to your target. Lower numbered comms are more friendly than higher numbers (1 being friendliest).

COMBAT

Engaging in Combat with an Opponent

The Privateer universe is, by its very nature, a dangerous place. You are confronted with the danger of navigating into a star; your ship's drive malfunctioning, turning it into a floating coffin; the hull being holed, losing atmosphere; even a lack of supplies to last a journey. The greatest danger by far, though, lies with other sentient beings.

Privateer is set against a backdrop of interstellar war between humanity and the Kilrathi. A pilot could easily be caught up in this war, and must defend against all types of assailants. Further still, you must also deal with dangers from your own kind. Pirates, merchants, even the militia may be after you, your ship or your cargo.

Survival requires more than heavy shields, high afterburner velocity or a nearby jump point. Combat skills - the ability to bring down your opponent and halt their attacks on you - are highly valued in Privateer. So, do you have what it takes?

Combat involves several functions already covered in other sections of the manual. These include Flight Techniques, Targeting, and Communication to name only a few. What we are concerned with here are the absolute basics required to engage in successful combat.

Usually, the first warning that you are engaged in combat will be either a communiqué from your opponent, seeing them fire, your missile lock indicator, or worst of all, hearing their weapon's impact and seeing your shield levels falling.

The first thing to do is locate, target and lock onto your opponent. It is recommended that you remain focused on that one opponent. This ensures that they do not have time to recharge their shields, while yours continue to take a battering.

In the center of your flight screen (the HUD), is your targeting bracket. Your initial vessel (the Tarsus) comes equipped with a forward mounted weapon that fires a burst of energy centered on this bracket. When engaging in battle, you will need to keep your opponent located within this bracket, giving a better chance of hitting your opponent with your weapon.

Your Multi-Function Display (MFD) shows a (2D) representation of your opponent. As you hit your opponent, you will note that their shields reduce to nil. At this stage, any further hits begin damaging armor, followed by internal components. As damage accumulates, the ship representation will become a deeper red. Once enough damage has accumulated, your opponent's ship will then explode.

At this stage, use your targeting keys to focus on your next opponent. If all opponents are destroyed or have fled, you have succeeded - Congratulations!

Guns

Available guns come in several different designs with varying damage, range and energy consumption. They are all powered by the spare capacity of the ship's reactor, represented by an energy bar located in the HUD. Firing a weapon reduces the surplus energy available. Where the ship has spare capacity, and energy weapons are not firing, the energy bar will slowly increase back to full.

Ships with multiple gun mounts may have several different types of guns available. These are displayed in a Weapons Display in the MFD. The player may cycle between the various available guns, selecting the required gun for firing. The final selection will highlight all available weapons. This selection is called full guns and enables all available guns to fire.

To cycle through available guns, use the key **g** (**G** to reverse). To fire a selected gun, use the **SPACE** bar (joystick trigger (button **0**) or left mouse button).

Missiles and Torpedoes

The Ship Dealer has a large selection of missiles and torpedoes available. While their effects vary, their operation in combat is the same.

These weapons consist of primarily a solid tube with a propulsion system, guidance system (most models) and a warhead. They are mounted in dedicated weapon racks on your ship, and launched at your opponent. Acting as a miniature ship, your missile or torpedo will approach its target, and when within range will activate its warhead (causing explosive damage or various other effects).

In order to use a missile or torpedo you must first target and lock onto your opponent. This activates the locking mechanism (if any) of your weapon. You will see a diamond appear around your opponent once the weapon has its own lock. To fire, press the **ENTER** key or **KEYPAD ENTER**. As with guns, you may have a selection of different missiles and torpedoes. Where this is the case, you may cycle through them using the **w** key (**W** to reverse).

Inertial Target Tracking System (ITTS)

Certain upgradeable scanner systems have the ability to track and record your opponent's speed and trajectory. Using this data, plus your ship's speed, trajectory and weapon velocity, the ITTS calculates a lead point located in front of your opponent's ship. This lead point is the aiming location that gives the greatest chance of hitting your opponent. Your lead point appears as a small diamond located at a varying distance in front of the nose of your opponent's ship.

Electronic Counter Measures (E.C.M.)

Electronic Counter Measures are designed to foil missile and torpedo attacks on the craft to which they are installed. Activation of E.C.M. lets loose a barrage of electromagnetic noise, focused false scanner images, infrared beams, and altered signatures intended to confuse missile targeting systems into misjudging the size, location, and direction of the E.C.M. user (Be aware that E.C.M. does not prevent a missile from flying straight and hitting you). While not necessarily 100% successful, such measures do reduce the number of successful attacks with such weapons. In testing, each level of upgrade appears to provide an additional 25% chance of success.

Once E.C.M. is installed onto your ship, it activates on launch.

Tractor Beam

A tractor beam utilizes gravitic technology to attach an ionized energy beam to a target. Once activated, the beam will increase gravitic power, thereby drawing the targeted object closer to the tractorship. Once close enough, and if the object is sufficiently small, it will be stored away in the ship's cargo bay.

Where your ship is not equipped with a tractor beam, but is capable of being equipped with one, go to the Ship Dealer if you want to acquire one.

A tractor beam is commonly used to capture loose cargo pods and miscellaneous debris - typically being employed after a battle. A favorite with pirates, it is also used by merchant fleets to transfer cargo between ships and on mining ships extracting raw materials from asteroid fields.

A tractor beam is installed to a gun mount in the same manner as any other weapon. To use a tractor beam, cycle through your guns using **g** to select the tractor beam alone. Target and lock onto your object of interest, use **F9** to match speed, **TAB** to afterburn close to the object and fire the tractor beam using **SPACE BAR** to capture the object.

Turrets

While most ships have forward firing weaponry mounted, many ships, including large fighters, cargo haulers and capital ships, also mount turrets located in various positions around the hull. As these ships are generally unable to engage in a dogfight requiring high maneuverability, these turrets form the main line of offense and defense.

While turrets vary in design, they all operate in a similar manner. Press **F5** to enter a turret. Press **F5** again to return to the cockpit, you can cycle between additional turrets by hitting **F5** again.

Death

Self-Destruct

Frequently used to rid a player of a pilot character to which they hold no further interest, a player may commit suicide. Pressing self-destruct will destroy your ship and end the game.

Activation of the self-destruct is via the key **ALT+d**.

Reloading the latest Savegame

It is the nature of the Privateer universe that any travel a pilot makes is done so at his or her own risk. Sadly, in spite of the skills of the pilot, the ship type, and the upgrades on board, it may well be that your character will die - nobly in battle, or ignobly as a smear against the side of a station or capship.

Death in Privateer is not finite. While you may, if you wish, start right from the beginning in a new game, with a refurbished Tarsus, no jump drive and some cash, most players use the option to reload their latest savegame. Reloading returns the pilot to the last saved game. To reload a character, press **r**.

Miscellaneous Gameplay Functions

Quitting

Quitting and exiting the game may be accomplished in two ways. While in flight, press **ESC or ALT+x**. This brings up the quit function in the background operation of Privateer. Pressing **q** will then quit the game. Otherwise, press **ESC or ALT+x** again to return to normal flight. To quit from a base, enter a base computer screen, select **Options**, then **Quit Game**.

Pause

Use the **p** key will pause the game during play. Press it again to resume play.

Music

Both music and sound are an integral feature of Privateer, providing the right mood and atmosphere, whether on a base, in the middle of space or in a major battle. Initial settings for volume are determined at configuration; but can be adjusted in game. You can also skip any music tracks.

Name	Key	Description
Skip Music Track	[CTRL+s]	Skip Music Track

Music Volume Down	[<]	Music Volume Down

GEMINI SECTOR

The Frontiersman: Interview with a Privateer

As told to Chandra Karr

For the fourth installment of our ongoing series on the young pilots who make a killing prospecting the open space lanes of Gemini, I went to find out what motivates a hotshot pilot to risk it all, to seek out new challenges in our little corner of the war. I was curious what these young people were leaving behind and what they hoped to achieve, knowing the odds against them. I chose Helen, a small agricultural planet in Troy System, to find my subject. Helen doesn't have much to recommend it, but at least there's a bar. Out in this part of the Confederation there are only three kinds of people in a bar: those looking for the kind of work that doesn't get publicly advertised, those offering that kind of work, or anyone looking to blow a paycheck on some Mjolnarian Stout. I was hoping to attract one of the former by posing as a fixer, and it worked.

I was sitting at a small table near the door, listening to the bartender give advice, when I spotted my target. A young but weathered man walked in with an air of confidence that advertised for him. He lifted his personal computer from his belt with the ease of someone who had performed this gesture a million times. As he checked his mission roster I was drawn to the vertical scar through his left eyebrow. He looked hungry for work so I threw him a morsel.

"You looking for work or just to get drunk?" I asked, winking from my table.

"Both, if that's an option. But I'll settle for either." He smiled, laid his computer on the table, straddled the chair across from me, and asked, "What can I do for you, Ma'am?"

I explained I was writing an article and wanted to hear what had brought him here. He was interested, eager even. What follows is his story as he told it to me over too many drinks in the cheap bar of a nowhere agricultural planet.

[All names have been changed to prevent this from becoming a vehicle for self-promotion. To the best of our knowledge, all the events described actually took place. Ed.]

Six weeks ago I was first mate on the *Scarab*, a bucket of bolts merchant ship held together by bootlaces and luck. We were jumping out to Sheol, a deep space science station. It was a good contract running supplies, food and equipment. We'd made the run before and I was looking forward to spending some quality time with Jo. She was heading an investigation of unstable jump points in the area and we had found each other, well, compatible. I was on the bridge thinking about the phase ball rematch I owed her, not watching the consoles at my station. The heavy sound of Geof Kane's boots clanking on the metal deck brought me to attention.

Kane was a big man who was most comfortable wearing the mantle of command. He was a bull of a man, always moving forward, unable to form the concept of retreat. That's why he went freelance —too many rules of engagement in the military. Kane only obeyed the laws of expediency and profit. He had trained all nineteen of us, forming pilots, gunners and mechanics from the soft clay of street urchins and stowaways. We depended on him for leadership and each of us owed him our life. Kane came in and stood heavily by a large bay window, turning his Academy ring deliberately.

"We'll be arriving soon," he said slowly, "and I want you on your toes. I don't feel good about this run."

"Why so nervous, boss?" I asked. "You know something or just got a feeling?"

"I don't know yet. Maybe it's nothing. I know the captains of the last *Draymans* to make this run. We were supposed to meet back on Baroda for a drink. I still haven't heard from either one of them. They're old pals from my Navy days — I really should've heard something by now."

"Maybe they just stood you up, boss."

"I hope you're right but, just in case, I want you on your toes and ready to get us the hell out of any trouble along the way. I don't think my friends stood me up. There haven't been any distress calls from the base. Could be business as usual, but we should probably expect the worst." He fidgeted with the console next to him, glanced nervously at the windows, and left. Images of Jolene attacked by a faceless enemy that I wasn't even sure existed plagued me for the remainder of the journey.

The trip out was uneventful except for Kane's nervousness. After several days we jumped out to Sheol's system. I was on the bridge. As the streamers of light settled into a more familiar starfield two gray *Talons* raced towards us. I was edgy and damn near fired on them before realizing they were our escort. The huge and ungainly *Scarab* made her way to Sheol's main hangar, the *Talons* moving beside her like remoras on a shark.

The science outpost was made up of a series of hangars off a central hub that housed personal quarters and open office areas for data analysis. They primarily sent out probes or small vessels in search of new jump points and asteroids rich in mineral deposits, as well as the smaller, more esoteric astrophysics work with no exploitable payoff for another generation or two. Because of their isolation there was no one except the researchers - no service personnel. The dingy Apocalypse Bar was staffed by whoever was available, usually someone waiting for a probe to reach its target system or for an automated analysis to finish. Administration, repairs, and distribution of food, clothing and equipment worked the same way. The only full-time position belonged to Lars Furstenburg, who was base captain. He was held accountable for anything that might go wrong and ignored when significant progress was made. Furstenburg was new. He had arrived less than four months ago, well after our last run, and seemed to be still in the midst of finding his footing among the staff and crew.

Furstenburg greeted us in the sparse, unfinished hangar.

"I have regret that I did not find you," he said, "to warn you of our uncomfortable situation. The last two supply ships were destroyed. First one got blown up when leaving, second before it left the jump sphere on its way in-system. But you had pleasant trip, no? We will unload and then have a drink, yes? Thank you."

Geof Kane was livid. "How can you be so flippant? Who destroyed them?" He didn't wait for an answer, "Those were my friends, sir. I'm sorry, but it seems to me that you could have made a little more effort to reach us. Our itinerary was forwarded to you over a month ago and we never deviated from it. You had a responsibility to warn us."

"I will not argue with you. I, too, mourn loss of your colleagues but my responsibility is to the people of this base. It could not be allowed that you not come from fear of being attacked. We have been too long without fresh provisions. We have much work to do. Meet in my office in five minutes, yes? We can use your know-how to analyze base security. We do

not know who these brigands are, but we need protect ourselves and find out if possible." He started to head up to his office, turned and said, "I sorry to gamble with your life, but is only way to get you here." I don't believe Kane was any more satisfied with that answer than I was.

The inhabitants of Sheol moved swiftly and efficiently to unload the supplies we'd brought. I'd assigned a few of our men to security to keep an eye on our goods as they were unloaded, but I now saw that that was unnecessary. The men and women unloading the cargo were careful, organized and visibly relieved that we had arrived. Only one of my security men was having any problem at all - he was being badgered by a woman whose voice echoed throughout the hangar.

"What's your name, sir?" she asked. It was Jo who was beating up my security detail. I crossed under the *Scarab's* still-cooling engines toward her.

"Uh, Hank," the man stammered, "Hank Slater..." Security personnel weren't used to answering questions.

"And, Mr. Slater, just why in the Sam Hell are you standing around, carrying nothing but that stupid sidearm, when we've got work to do?"

"Well, Ma'am, I uh... my boss says there might be looting, and he says..."

"Hank, be a good grunt and go tell your friggin' boss that there may be violence if he doesn't get you guys into a few waiting cargo loaders." She motioned toward a line of machines standing idle along the hangar wall.

By now, I was standing right behind Jo and figured it was time I announced my arrival.

"What seems to be the problem?" I asked.

Jo answered without turning to face me, her voice filled with contempt. "The problem," she said, "is that this big ape's boss won't let him do an ounce of real work."

"You must mean me."

She turned, looked me square in the eyes and said, "Well, if it isn't Mr. Precaution back from the hinterlands to save our starving village from itself." She smiled. "Will you make these men useful or do you plan on spending your time here alone?" A wink softened the remark but I got the point.

"It's all right, Hank, do as she says. Collect Al and Frank and the others and report to Captain Furstenburg for unloading assignments." I turned my attention to Jo. "Here's a proposal for you, Doctor - you promise to quit harassing my men and I'll buy you the best dinner this tin can has to offer. How about it?"

"How about I make no such promise and we skip dinner for healthier activities?"

"Deal. Oh, and I expect a rematch if you guys still have a phase ball court."

"We do and you're on."

She turned to go settle a dispute that was developing over fuel storage. I watched her cross the hangar, and hoped she was as pleased at our arrival as I was to be here. A kind of awkward tension had fallen over the crew before our arrival, none of us sure whether we would have to fight or if it was all just a false alarm. Jo had pulled me out of my depression. Hustling to unload the ship seemed to be helping everyone else. Finally we had a task with a clear, achievable goal, getting the supplies unloaded and looking into who might be behind these recent attacks - a welcome change of pace.

Kane was taking the whole unloading and base defense operation very seriously. No surprise, given that he thought there was a force out there preparing to assault the base. I figured that if he was right, then it must be a small force - anyone with the firepower to destroy a couple of *Draymans* had the firepower to destroy an outpost like Sheol unless, of course, they didn't have the fuel or munitions to do both.

Once we had arranged for the unloading and distribution of cargo, I headed off to discuss security concerns with Furstenburg and Kane. Furstenburg's office looked out over the hangar and into the void. We could clearly see our staffs cooperating to unload the *Scarab*. I moved into the room, expecting something a little more commanding but pleased to see that Furstenburg was a busy man, definitely not a delegator. He had both a desk and a small conference table, the latter cluttered with chits and tablets that made it clear he only used his desk occasionally - probably not enough surface area to hold the clutter of "current" projects and files.

The two captains were already deep in discussion when I arrived, a small hologram of the base flickering between them. As I entered, Furstenburg began shuffling through the mountains of correspondence on the conference table.

"There is, on this table, a message that did come for you, couple of days ago," he said.

I was surprised to hear this. Who would send me a message? Everyone I knew was here: Jo, Kane, the *Scarab*'s crew. Unless it was some kind of a recruiting message from the Confederation Militia ... Finally, Furstenburg found what he was looking for.

"Ah ha!" he said. "Here is your message sent from the Gemini sector. I see you have frontiersmen friends, yes?" He handed me the disk. "Use the monitor on my desk should you want to take it now."

"That's all right, we've got business to attend to."

I pocketed the disk and joined them at the conference table. I only knew one person in Gemini, my grandfather, and I didn't figure he'd be sending me anything more important than a birthday card, not that I'd ever gotten one from him. The security analysis was top priority. I was hoping that there would be some sort of clue in the transmissions from the probes that Sheol regularly sends out for scientific reasons. Knowing our enemy would be the first step in defeating them.

We all agreed that violence in the system could only imply an impending threat to the base. There were several things we could do in order to seek out the people who destroyed the ships and to protect the base. We divided up these tasks amongst ourselves. Furstenburg took charge of readying the base's launchers and shields, as well as preparing a schedule for the volunteer security team. Kane would coordinate with both Sheol's and the *Scarab*'s pilots to develop a more effective patrol pattern. Analysis of data sent by the probes and missing cargo ships fell to me. I was to work with Jo and Blake Sorensen, an older researcher who would be able to spot anomalies in the transmissions. Furstenburg pulled a monitor over to his seat, nearly knocking over a cup of coffee in the process, to inform the members of our teams of their new assignments and that they had only three hours to report for their first meeting. My group was to meet in Blue Deck, Lab 37, close to my quarters. I had just enough time to eat, shower and read my junk mail from the edge of nowhere.

With the team notified, I headed for my room in Green Deck. There was no intra-base transportation except walking. I passed through halls filled with blue jumpsuits carrying crates of newly arrived supplies. I stopped to help a young man move a too-heavy box into one of the smaller dining areas that were spread throughout the base. With this delay, it took nearly twenty minutes to reach my quarters, but I didn't mind. It was a nice opportunity to reacquaint myself with Sheol's color-coded corridors and windowless workspaces.

My room's dull grayness stood in stark contrast to the bright green of the hallway. The bed, night stand and desk, with its small communication console, all reflected a unified Spartan vision. Comfort was not a priority in the design. All the

same, I felt relaxed by the very austerity of the room. As I emptied my pockets of I.D., personal computer and a few loose coins from Baroda, I dropped the disk Furstenburg had given me. It was time I read my mail. I switched on the comm unit, put the disk in and sat back, expecting propaganda or a postcard from Grandpa Mack.

The screen filled with the typical sender information. It was from Mack all right, and had apparently been forwarded six or seven times before someone knew where I'd be. It had been sent nearly a month and a half ago, marked priority one. Better late than never, I thought. I hit the key to proceed. Mack's face appeared on the screen. He took a drink of something that wasn't water and began his message.

"Look, kid, you know I'm not much of a talker so I'll get straight to the point. I'm dead. This is my last will and testament and whatever. You're all I got in the way of family and your mother made me promise to see that you were taken care of. So, here goes ..." He paused to take another drink, winced and continued. "I, Mack Christensen, being an old man and of ill health do leave whatever hasn't been repossessed to you, my only daughter's only kid. Right now I've got a *Tarsus* class ship that I bought from an Exploratory Services officer with too many debts, and a little cash that I plan on spending before you get this. Sorry, but you know how it is. Whatever's left is yours. It may not sound like much, but what I'm trying to give you is an excuse to come see Gemini. I was charting new jump points and getting in bar brawls out here when you were born. There's been a lot of development since then but it's still the best place to make a quick buck. I may not have given you much over the years - now that I'm dead I figure you could benefit from a little frontier action. I guess I better go before I get all sentimental and ..." he looked down at his glass and the screen went blank. A small green light indicated that there was a second message waiting.

I went over to the sink, washed my face, took a long hard look at myself as the only heir of an old lush. I guess I needed a minute to take in the fact that Mack was dead. I was sure that the second message was the executor telling me what had happened and how to contact him - details that could wait. It wasn't the first time I'd gotten a message like this. There were still a couple of hours before I had to meet with the investigative team and I was planning on spending them figuring out whether or not Mack's bequest was worth dropping everything to go out and deal with. There was a lot of work coming up for the *Scarab*, and getting to Gemini wasn't exactly a day trip. We had contracts to fulfill. I had a career with Kane, who treated me as a first officer and a son. This was a terrible time to take an extended vacation.

I was pacing, looking over at the faint green light on the communications console, when my reverie was interrupted. It was Jo opening the door.

"What happened to you? You look more confused than a Firrekan hatchling."

"Have a seat, Jo. It's nothing, really. Just that I got this message that my grandfather died and they want me to go out to Gemini, of all places, to take care of the estate," I said, pointing to the console.

"Oooh, an estate? Really? I thought you said Mack was an old drunk, spent his time remembering his glory days for anyone who'd listen and a few that wouldn't." She was shaking her hair, as if its tangles took priority over my dilemma.

"Turns out he had a ship. A *Tarsus*. Maybe even a little cash. Who knows?"

"I think you should quit the *Scarab*. Go out there and get that ship," she said, with more than a trace of sarcasm in her voice. She started to pace. "I think you should drop everything - me, Kane, the *Scarab* - and run away to where you'll be poor and a nobody." She stopped pacing, squared her shoulders and glared at me. "Look, seriously, I don't think you should do it. If you decide to leave the *Scarab*, come here and work with us, but don't go taking risks if the only up side is an out-of-date ship. The *Tarsus* hasn't even been manufactured for ten years!"

I didn't answer. I didn't have an answer - not yet - and we had business to attend to. The silence quickly got awkward, but I didn't know what to say. Still in silence, we headed over to our meeting.

We were a good team. We got along well and understood what needed to be done. With all the equipment at our disposal it was easy to set up a detector for non-standard emissions. There was a nearby asteroid field, and that's where we focused our search. We were poring over the data transmitted by a probe that entered the asteroids a handful of hours ago, just before our arrival in system. Though frustrated that we hadn't discovered anything immediately, we resolved to be patient and thorough. It wasn't too long before the slow and steady approach paid off.

Jo spotted it first. There was a small peak in X-ray emissions, as if a short burst had hit the probe. Blake said that he had noticed a similar anomaly a few days ago but it had been dismissed because they were actively searching for something else. He put his tea down to rifle through his notes from the last week and announced that the previous Xray peak was also recorded by a probe sent to the asteroids. We put the computer to work looking through the last month's probe transmissions for other X-ray spikes. We had to be sure it wasn't a false reading or a natural occurrence. As Blake fired search parameters and commands into the computer, Jo and I set to work breaking down the Xray peak to see if we could determine whether it was a man-made transmission or not.

Almost simultaneously, Sorensen announced that there had been several X-ray peaks, all from probes to the asteroid field and all within the last three months, and we discovered that it was indeed a man-made emission. The next step was to see if any information could be gleaned about where this message had been sent from. This turned out to be the easy part. The probes automatically report the direction from which they receive any input. Confirming with all positive reports we were able to triangulate on the source. It was us. All the anomalous X-ray peaks had originated from Sheol.

"Can we pinpoint where the messages were sent to?" I wanted to know.

"I don't think so. It was really sort of an accident we caught the transmission at all. Whoever these guys are, they're definitely using the asteroids for cover," said Blake.

I was curious as to who might have access to equipment on the base that could send such a signal. Jolene and Blake agreed that there was no convenient means available and that whoever was sending these messages must have their own device. It was time to bring the others in on our discovery.

We sent the base captain a report via computer. After we decided to meet again after dinner to devise a way to search the base for an X-ray emitting device, I headed off to inform Kane of our discovery and to get his input on ways to search for the emitting device with maximum efficacy.

Running up to Kane's quarters, I nearly smashed into a harried-looking Furstenburg, who said he wanted to get the *Scarab* fired up and into space to fill a gap in the patrol schedule as soon as I was ready. He wanted to come along. I thought this was a strange request; I could think of no reason he should want to be on a patrol run. Furstenburg didn't seem himself. Still, I agreed.

When I burst into Geof Kane's quarters, he was pacing the room like a caged lion, muttering something about the two other ships that had been attacked as they neared the base. Scratching his once black, now white, crew cut, he mumbled, "Why wasn't the *Scarab* attacked?"

Reluctantly, I interrupted his pacing and filled him in on the message beamed from the base to the asteroid field. His face became even more somber than it had been to start with. I also told him about Furstenburg's request. Kane asked if we had determined when the messages first began. I gave him the three-month figure and he frowned. It all came together.

"It looks to me," Kane said, "like Lars Furstenburg is out to sabotage the base and he needs to ensure safe passage out of the system. He expects us to be that ticket. Let's go ..."

Kane rushed from his quarters and toward the *Scarab*'s hangar, towing me along in his wake. Furstenburg was there waiting for us. Kane wasn't one to let talking get in the way of action. He moved toward Furstenburg with the ferocious

look of a predator closing for the kill. Furstenburg stood his ground, only his eyes revealing a kind of nervous fear. Kane backed Furstenburg up the ramp and into the *Scarab's* hold. I was close behind.

"When is it coming?" Kane roared. "When are your people gonna attack the base?"

Furstenburg answered by pulling a blaster from beneath his coat with faster reflexes than I'd given him credit for. He spoke slowly, steadying his nerves, "It does not matter. There is no way this evil font of technology can survive our onslaught. You will pilot me off base. Now! Your lives may be spared despite your high tech alliances."

Despite the obvious danger, Kane hadn't stopped moving toward him. Behind my captain's advancing bulk I was able to draw my gun, an old-fashioned laser that worked well on flesh without damaging a bulkhead. I dove to the side, firing past Kane on my way to the ground. A burst of brilliant red light sliced into the base commander-turned-Retro. Kane looked down on me.

"I'd have decked him, son. No need to get dramatic."

We had no idea how much time we had remaining before the assault. All we could do was get out and try to stop the attackers before they reached the base. I headed for the bridge as Kane went to assemble a skeleton crew. I had all engines ready for launch when I heard the hatch close and the pounding of gunners' feet on the metal floors as they headed for battle stations. I didn't wait for clearance to launch. The *Scarab* was ready and we were likely the base's only defense. It seemed that Furstenburg had disabled the base's automatic defense systems.

Out in the void we turned toward the asteroids. White *Talons*, Retro ships for sure, emerged from their hiding places and headed to intercept. The Church of Man was continuing its campaign against all things technological and we were its next target. Kane took the helm as I headed for a vacant turret. It wasn't long before we were in amongst them, the all-seeing eye of their agrarian deity emblazoned on their fighters. These were maniacs, unafraid of death, willing to ram you, destroying your ship even if it cost them theirs. From the turret I could see flames erupt from our hull, a quick burst of plasma destroying an enemy. That reduced the odds to five against one.

Then my radar went red. I thought it was a glitch. There was a swarm headed past us straight for the base. We'd been suckered into a trap, separated from the base the way wolves separate a calf from its mother. Before I could get a lock on any of the ships I was slammed against the inside of the turret. We were out of control, spinning without purpose. I unstrapped myself, clambered from the turret and headed for the bridge.

When I got there, I stopped short. The bridge was filled with smoke and debris, red warning lights flashing in the half light, cables hanging lifelessly from the ceiling where a panel had fallen and crushed Kane. There was nothing we could do for him. There wasn't much we could do at all but fight for our lives. I assumed command, sent most of the crew back to their guns and the rest to restoring our maneuverability. This was too big a job for our one repair droid.

Outside, three *Talons* still circled us, two of them damaged. I knew that, given our condition, we couldn't do much to them but there had to be something. Switching power from guns to shields, I resolved to use the ship's bulk as her defense. It didn't take long for a Retro to make the mistake of flying directly in front of us. I engaged afterburners and sent the *Scarab's* weighty prow through the tiny ship. I had the comm lines open and shouted orders into the air.

"I'm taking the shields down. Hank and Johansen use the extra power to blast those freaks. Everyone else hold your fire. On my mark ... NOW!"

Johansen destroyed his target, but Hank only managed to clip his. Its shields were down but there was no hull damage. The quick *Talon* turned to approach us from behind. Textbook, I thought. I hit dead stop, freezing our position. He blew past and Hank nailed him with a torpedo. We were in the clear for now, but Sheol was dying. Lights blinked out all along its hull as power was cut. We could see they had been boarded - white *Talons* stood out against Sheol's dark hull and the guns protecting the main hangars sat lifelessly by as enemy ships were docked. All I could think of was Jo fighting

for her life against those bark-eating, anti-urban, anti-stellar, neo-pagan, hypocritical, knowledge-destroying fanatics. I went red trying to turn the *Scarab* to her rescue. They had to pry me from the controls. Sheol was a loss and we weren't doing much better.

By the time we had jumped back to a civilized world I was numb with grief. Jo was certainly dead, we had buried Kane in space during the trip, and the *Scarab* had received much more damage than we had the finances to repair. We sold the ship for scrap and divided the cash. Some of the crew stayed together, hoping to find financial backing. Some went back to far-away families left waiting months ago. I had no choice. I exchanged work for passage on a small merchant ship, the *Sword of Damocles*, and headed for Troy in Gemini. There I knew I'd find a new beginning, a chance to be the explorer I had admired in Mack Christensen and the master of his own fate I had admired in Geof Kane.

Mack's bequest had the unfortunate side effect of actually costing me money. The *Tarsus* he left was no longer in working order and I sunk most of my money and what little he left me into repairs and hangar fees. It's been nearly two months since that day I last saw Jo, and I'm ready to move on. I have my own ship and a new destiny as Gemini's newest privateer.

Gemini Sector: An Overview

By Lieutenant Gabriel Quentin, Exploratory Services

Gemini is still a newborn sector struggling to find her feet. It has only been 30 years since the military set out to contain Kilrathi expansion by entrenching along the border. It was during this early entrenching period that the Exploratory Services (ES) were first called in to map out available resources, including habitable planets, mineral-rich asteroids and jump tunnels.

Within the first five years of exploration two major factors contributed to the opening of Gemini to public enterprise. The first was the rapid entrenchment of military forces far from established supply lines and support services - they needed access to local resources. The second factor was the tremendous wealth of resources discovered by the ES in Gemini. This was essential in boosting the Confederation's gross worth. As developers and entrepreneurs moved in to exploit the discoveries made by the ES, several standard base types evolved (see below). As the populations grew, Gemini was divided into four political/cartographic quadrants — Potter, Humboldt, Fariss and Clarke, clockwise from bottom right on a standard Gunther projection.

Quadrants

Clarke

Clarke is the fortress, the heart of the military entrenchment begun 30 years ago. Today, the seat of all Gemini's naval forces, Perry Naval Base, is in Clarke. This is the front line, dotted with jump points into Kilrathi territory. In this area, ships must constantly be ready to engage in border skirmishes. However, because of our strength, there has not been a full-scale battle in Gemini for 11 years. The whole sector owes its existence to the strength of our naval forces, forces that have blossomed under Admiral Terrell's capable leadership.

Fariss

Asteroids. That one word sums up any traveler's experience of Fariss. Here are more mining bases than in the surrounding five sectors combined. There are agricultural planets and refineries, to be sure, but the most prevalent industry is the extraction of minerals from the many large asteroids that clutter Fariss' attractive vistas.

Humboldt

Humboldt is the sparsest of the quadrants. The central hub of Humboldt is Junction, a system with three habitable planets and six jump points. The quadrant is limited in natural resources, but Junction earns its name as one of the most essential nodes in Gemini's web of jump-ways. Aside from Junction, Humboldt offers few mining and refining opportunities and a lot of empty space.

Potter

Potter is the heart of what little civilization Gemini has. The capital, New Constantinople, is located here, as are many other large population centers. The most important of these, New Detroit, is renowned for the wealth of work and opportunity to be had there, not to mention the high quality of alcohol imported from Centauri and Ceti Prime. Potter is the only quadrant that has more than one Pleasure planet, built entirely on rabid consumerism and providing R&R for the military types. Reports of Kilrathi and pirate attacks in Potter have dropped to the lowest rate of any border sector.

Base Types

As mankind has settled the stars, several types of bases appear wherever we go. As you travel throughout the quadrants you will certainly encounter each of these. Below, you will find a thumbnail sketch of each base type to help you set your expectations and goals before landing at any given locale. Also listed are four of Gemini's most significant places: Perry, Oxford, New Constantinople and New Detroit. Be advised that not every base will buy what you have to sell - for example, it is obviously futile to try to sell unrefined plutonium to an agricultural planet. Trade can be very lucrative if you don't get discouraged and keep your wits about you. Enjoy your stay - may it be full of adventure and profit!

Mining

General Notes. Mining bases are affixed to and carved into large asteroids. This means that flying through an asteroid field is usually mandatory for getting there. Mines are most prevalent in Fariss Quadrant, though they are also found, less frequently, throughout the sector. The bars are generally Spartan and all drinks have been imported (and are therefore expensive).

Trading Tips. Mining bases need food. They have plenty of minerals and not much interest in luxury goods. Mining bases also seek ways to distract their lonely workers. Issues of *Plaything*, games or other entertainment are in high demand.

Agricultural

General Notes. These are planets whose primary industry is farming. They are usually large, with a high land-to ocean ratio. Terraforming is in progress on most of these worlds, but domed cities are still the rule. Life here is a lot of work, and Gemini is trying to encourage colonists to have more children and settle down.

Trading Tips. Furs, lumber, pets, grain and foodstuffs are available here. They have a great need for more equipment and workers, as well as housing for their growing population.

Pirate

General Notes. With the population boom has come a piracy boom. At times, entire bases have been taken over. These hostile takeovers have been mostly limited to Fariss Quadrant and, therefore, to backwater mining bases, especially those left abandoned due to depleted resources. Pirate bases are a hazard to aboveboard shippers and a boon to unscrupulous dealers in illicit goods. Due to the nature of this type of base, no guild offices are ever available here.

Trading Tips. While I would rather say that it is not possible to trade with pirates, that is not the case. These bases need food and trade in weapons. They deal in drugs such as Brilliance, and continue to trade slaves as if we were living in the 23rd century. Please note that persons known to attack merchants and trade in contraband are considered saboteurs of the war effort and are attacked on sight by Confederation forces.

Pleasure

General Notes. Pleasure planets are the result of high demand, a sudden population explosion and a few lucky prospectors coming into too much wealth too soon in their lives. These are places of hedonistic games, a *tromp l'oeil* of culture. They are also important pressure valves during these tense times.

Trading Tips. Pleasure planets are hotbeds of consumerism. The population is interested in buying drugs, art, furs, games and anything fun or exciting. Unfortunately, they produce little besides movies.

Refinery

General Notes. Refineries are platform-based space stations whose primary purpose is to turn the natural resources of Gemini's asteroids and planets into advanced fuels, durable goods, etc. They are a major employer of skilled labor and are found throughout all four quadrants.

Trading Tips. Like mining bases, refineries have a great need for food and entertainment. They also need natural resources shipped in for processing.

New Constantinople

General Notes. New Constantinople is the capital of Gemini Sector. It is a major population center, with representatives of every major industry. It is located in central Potter and receives fairly heavy traffic. Confederation and militia patrols have a high chance of being around the base to protect it and to police the merchants, preventing the movement of contraband on or off base.

Trading Tips. Almost all art to be found in the area is produced here. New Constantinople is the hub of all political and cultural events. Due to its importance, people come from all over to buy and sell nearly everything. It is a good place to do business.

New Detroit

General Notes. New Detroit is one of the most fascinating of Gemini's urban centers. It is our industrial heart and it beats with the rhythms of heavy machinery. Even from orbit, the pervasive gray of buildings and smog are visible. Before there were refineries in Gemini's space, there was New Detroit. For three decades the central metropolis has been expanding to cover the planet's enormous land masses. Its bars and other businesses sit at the bottom of skyscrapers like the little hunched prophets at the bottom of Hadrian's Gorge.

Definitely a place to visit and an even better place to do business.

Trading Tips. Competition is stiff here. There is a glut of manufactured goods. If it's manmade, you can bet New Detroit's got it. They need natural resources and are willing to pay the price to get them. New Detroit's mixture of highbrow and sleaze industry means that there's a nook, out of the incessant drizzle, for any goods you wish to buy or sell.

Oxford

General Notes. The intellectual seat of the sector, Oxford is a university planet, well known for its research facilities. It has been built out to resemble Old Earth, specifically the old English college town. This makes the place a fantastic draw for tourism. It is located far from the front in Potter Quadrant and was one of the first planets terraformed in Gemini. Its library is renowned beyond Gemini's horizons, drawing scholars from distant suns to visit its hardwood halls and well-tended quadrangles.

Trading Tips. They will definitely sell books and other intellectual properties. Aside from that they have the same trading needs as any heavily populated agricultural planet.

Perry

General Notes. Perry, the military center of Gemini, is located in Clarke, not far from the Kilrathi border. Many military patrols originate here and you have a high chance of encountering these forces. Admiral Terrell runs his corner of the war from here. Perry is a model of efficiency and does a lively business in all industries. It is a fine example of starbase architecture as well.

Trading Tips. As the core of all local military operations, many supply lines come into Perry. They need food, medical supplies and the like. They sell lots of out-of-date weaponry here - a good start for a gun-runner. With so many merchants coming here, there is always a chance to pick up whatever you're looking to buy.

Survival Tips

by Lieutenant Travis Sanford

When I recently attended a convention on Oxford, I was fortunate enough to make the acquaintance of a young pilot working at the fighter base. Mark Thornton's boundless enthusiasm for his job impressed me so much that I decided to interview him for publication here. What I have compiled is condensation of our conversations about his training at the TCSN Academy. Here are the high points of his advice for rookie pilots.

Use your weapons and blasters wisely. When you are attacking hostile fighters with a combination of different weapons, you should follow a few very basic rules. For example if you open fire too quickly after firing a missile, you might hit the missile while it is still on its way and explode it harmlessly, leaving your enemy unscathed.

In crowded dogfights, it is always advisable to keep one target locked and systematically weaken its shields with gunfire. Once you have damaged the shield protection, you can easily finish the job with a well-placed missile.

In general, it is crucial to maximize your energy levels at all times. Avoid opening fire randomly and at long ranges, since this wastes valuable energy and can weaken your shields at the same time. If there is no immediate threat in the area, you should probably cut down on your shield protection levels and save the energy in case of a sudden attack. A few well-placed shots at close range with full blaster power are often more effective than a whole barrage of long-range shots with diminished energy resources. You may overtake an enemy ship with superior afterburners, but take care not to use up so much energy that you do not have any resources left for your blasters. Balancing your energy is always a priority.

Target selection. The Examine Target MFD indicates how much damage has been inflicted on the hostile ship. Since you can evaluate shield damage at all times, you know when to launch an effective missile attack on your target. With the View Object MFD option, you can see exactly where your fire is hitting the target.

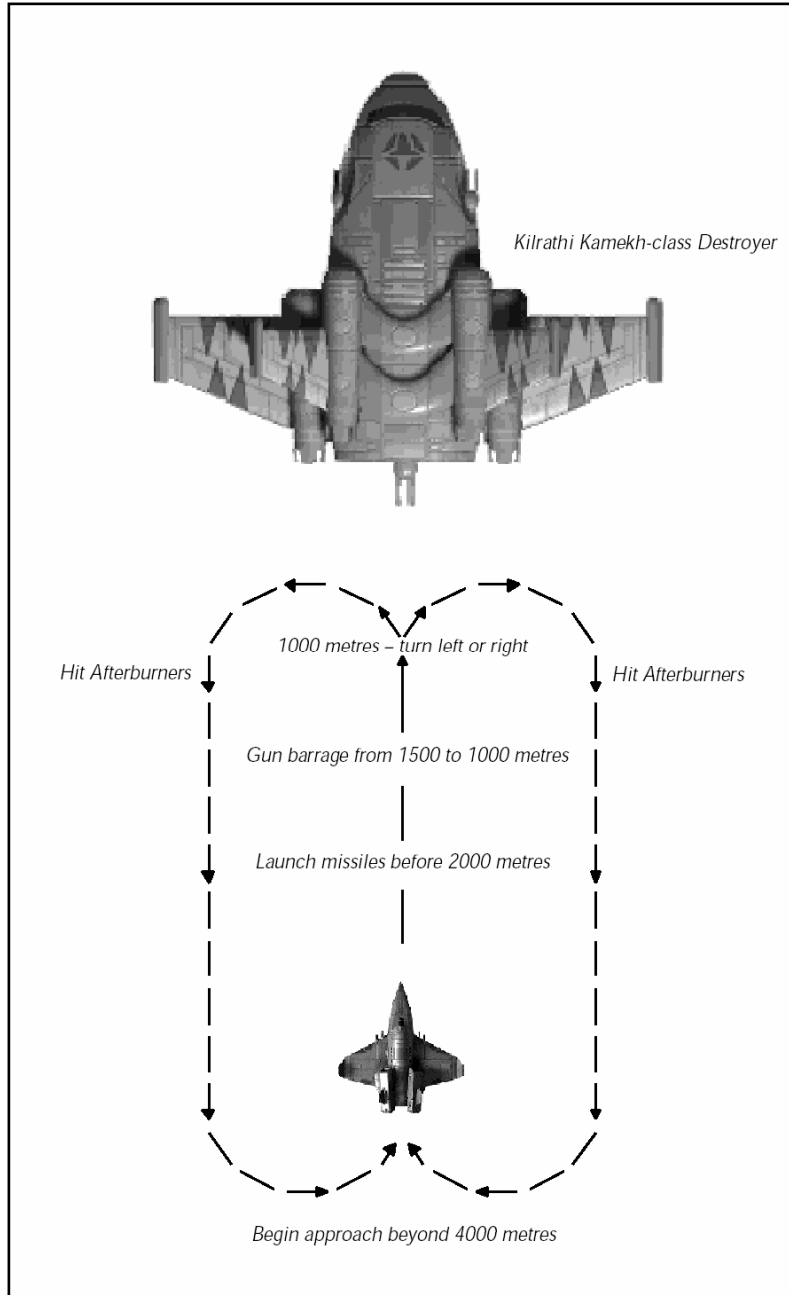

Afterburner slide. The afterburner slide is one of the most effective space combat strategies. If you are maneuvering at constant speeds, enemy tracking systems have no trouble honing in on you. Even velocity changes are not always enough to escape a deadly missile. If you punch the afterburners, however, and then turn hard to the right or the left, your ship will begin to slide. Since tracking systems have no way of anticipating a movement of this kind, an afterburner slide is one of the most successful defensive tactics. Slides also remove you from the line of fire and place you in a perfect position for a side attack on enemy ships. Most fighters carry weaker port and starboard armor, making a side approach the most obvious choice. When a hostile fighter is at a range of approximately 3500m, begin turning to the right at an angle of 30°. As soon as the enemy craft is barely visible on your viewscreen, hit the afterburners and accelerate to your maximum speed. Then turn hard to the left. Maintaining your current elevation during the slide is absolutely essential. Otherwise you are no longer able to open fire on your target from a side position.

Vary your speed. The most basic evasive strategy in combat is to vary your speed. Spin and turn maneuvers are not always sufficient to shake off a Church of Man terrorist. Using your afterburners for short, unexpected bursts of speed add an element of unpredictability to your projected flight path that make it hard for an enemy to zero in on your vessel. Keep in mind, though, that afterburners expend tremendous amounts of

generator power. Similarly, decreasing your speed to zero can mislead even the most experienced opponent. However, you must immediately increase your speed again or you become an easy target for any aggressor.

Communications. Communications are an important part of any combat strategy. If you wish to fight a neutral pilot, you can turn him hostile by sending insulting messages over your communications system. On the other hand, you may also successfully appease an incensed opponent by communicating your friendly intentions to him.

Concentrate on one enemy. The ITTS and other targeting features make it easy to keep one ship locked into your sights at all times. Shield generators can regenerate damaged defenses fairly quickly, making it essential to follow up each hit quickly. If you wait too long, you waste your shots. Instead, select one enemy and focus on it. Then try to take it out with quick, successive hits.

Attacking capital ships. Most capital ships are equipped with a formidable array of deadly weapons, which making attacks against them extremely dangerous. In addition, most capital ships are escorted by a contingent of fighters which must be taken out first. Once you have defeated the escorts, you approach the capital ship itself. The strong armor and shields on these vessels effectively counteract almost any damage inflicted upon them. Due to the blaster power on capital ships, a side attack is close to suicidal. In general, the best strategy for a capital ship attack is a maximum velocity rear attack. There is less blaster fire to the rear and the rear armor is usually the weakest. Make sure you have full blaster power before you start your maximum velocity approach from a distance of 4000m. You should begin firing missiles at a distance of about 1500m. At 1000m, break hard to the left or right and circle back before you begin another approach. This gives you some time to regenerate your blaster power. If you stick with this form of rear attack, you will soon record your first capital ship kill.

Glossary

"Vertex Arrays" - Vertex (drawing) data is stored in an array (record). OpenGL needs only call on the array, rather than execute every command in the array. In effect, OpenGL draws a star ship each time one is needed - need five, draw five times.

"Compiled Vertex Arrays" - Vertex data in an array can be locked down when it is expected to be used multiple times. In effect, OpenGL does not recompute the locked array data until all surfaces using that data have been drawn. OpenGL copies a starship only when the vertex array is compiled ... if more than one ship is on screen then it will only need to download it the first time to the card.

"Display Lists" - This setting takes vertex commands and stores them for later execution; it defines a drawing for multiple execution later. While vertex arrays can do this with a lesser amount of memory, display lists can operate faster. Graphics hardware may store display lists in dedicated memory, therefore increasing speed and efficiency, as well as offsetting the need for extra memory. Recommend do not use this setting if you do not have a high powered graphics hardware card.

"Separate Specular Color Vertex Lighting" - This setting identifies the bright specular highlights that occur when light hits an object's surface and projects onto your ship's reflectivity analysis of the surface. In effect, you get a shine effect on an object that changes depending on where both the viewer and the sun are.

"Per Pixel Lighting" - Per-pixel lighting offers the ability to calculate lighting effects at the pixel level, greatly increasing precision and realism in a scene. This setting makes the lighting effect sharper and more defined. Per pixel specular lighting is designed for a graphics card that supports pixel shaders – a DirectX8 or higher compliant card. Cards that will meet this criteria are nVidia GeForce3 and ATI 9000 series or above. Selecting per-pixel lighting with an older card will result in sub-par performance as the pixel shading is done via software rendering (i.e. by using your CPU).

"Reflection" – Selecting reflections calculates an environment map based on the background surrounding a ship. This map is used where the visual mesh is declared to be specular and is projected onto your reflectivity analysis of the surface (your view). One result is that objects become capable of reflecting light and can act like a mirror surface.

Appendix 1: Tutorials

Wherever you see letters in bold and bracketed (for example: **LMB**), please press that key. Note that **LMB** and **RMB** are left and right mouse buttons respectively.

Tutorial 1: First Arrival

*"Mack's bequest had the unfortunate side effect of actually costing me money. The **Tarsus** he left was no longer in working order and I sunk most of my money and what little he left me into repairs and hangar fees."* (Extract from original Privateer Manual created by Origin.)

With a sigh of relief, your next thought was to go in search of some rest and recreation, and then you'd see what the universe had to offer!

It is suggested that you read **first Chapter** before continuing.

After loading Privateer Gemini Gold, the first screen to appear in front of you is the Concourse for the Mining Base Achilles. Notice in the center view is your ship, currently located on the Landing Pad. Located around your ship are various access points to the remainder of the base. Use your mouse and scroll around your screen. At certain locations, you will notice writing appear at the base of the screen. This writing informs you of an access point, and what location on the base it will lead you to. Alternatively, click the **RMB**, which takes you immediately to each point in sequence.

The Bar (p43)

Locate 'the Bar' since we're after a bit of R&R. When the access point is highlighted and the name appears click the **LMB**. This activates the location, and 'The Bar' will appear as a new interactive screen. Here at the bar, you can always chat to the bartender to get the latest information, game play hints and gossip. Highlight the bartender, and click the **LMB**. His conversation will appear at the top of screen. Repeated **LMB** clicking will trigger various conversations.

Occasionally, fixers will appear in the foreground of the screen, usually seated at a table of some sort. Fixers make available various missions, equipment or knowledge for playing Privateer Gemini Gold. Refer to page 43, on how to interact with the fixers.

Locate the bar exit point, and **LMB**. We arrive back at the Concourse.

Mission Computer (p20)

Well, I've had a drink, so what's a pilot do for fun around here?

From the Concourse, locate and enter the Mission Computer using the same process used to enter the Bar. Accessing the Mission Computer takes us to the Missions Screen. You will notice, however, the top of the screen shows two buttons, **Missions** and **Info**. The **Info** button accesses the Player Information Screens. The **Missions** button returns you to the Mission Screen. **LMB Missions** button.

We are now in the Missions Screen. From here, you can review what basic missions are available. While fixers offer more dangerous, more interesting (and more lucrative) missions, they are often few and far between. The missions here are more standard in nature (but not necessarily less dangerous!). **LMB** on one of the green categories. The category expands to show the available missions of that type. Highlight one and click the **LMB**. Notice that the details of the mission appear in the right hand screen. If you wanted to accept the mission, you would **LMB Accept** at the bottom of the screen. We're not quite ready for missions, so leave the Mission Computer and return to the Concourse using the **Done** button.

Commodities Exchange (p23)

If I want to get anywhere in this universe, it's going to take money, and lots of it!

The simplest way to make money is to trade cargo. Buy where it's low priced, and sell high. To do this, you need to access the Commodities Exchange. Within the Commodities Exchange, click on the computer screen – this takes you to the Cargo Screen. Notice at the top of the screen, the type of base you are on (Achilles is a Mining Base). Underneath, you may note that you have 2,600 credits to spend, and 100 cargo spaces to fill. Your aim here is to obtain as much lowly priced cargo as you can afford and that your cargo space can take. The types of cargoes available are classified by category with many having subcategories.

A Mining Base is big on producing raw materials such as Iron, Tungsten, Uranium and Plutonium. As such, select the Raw Materials category. You will see a drop down of subcategories: Gems and Metals. Don't be worried if one or more don't appear, not all places produce the same goods all of the time.

Lets look at what Metals are produced by Achilles. The Metals subcategory opens into further subcategories, which in turn open out to show various types of cargo, colored white. This means that we have both the room in our cargo bay to fit the cargo, and the credits to buy them. If we didn't, they would be red in color, and we wouldn't be able to buy them. Highlight a cargo. Notice that three buttons appear in the center of the screen, **Buy**, **Buy 10** and **Buy 1**. These buttons let you buy (respectively) all the cargo available, ten (10) of the cargo, or one (1) of the cargo. Press **Buy**. Notice how the cargo disappears from the left, and appears in the right screen? Similarly, your credits and cargo space have reduced. You have now bought the cargo. If you wanted to sell the cargo, you would highlight it in the right screen, and click the **Sell** button that appears.

We want cargo to trade, though, so stay in the left screen. Repeat the above sequence to purchase as much cargo under Raw Materials as you can. Most likely, you will have credits and room in the cargo bay to spare. If so, move on to the next subcategory and purchase what you can from there.

When you cannot buy more Raw Materials (due to lack of credits, lack of cargo room or no more cargo available), click on the **Options** button. This takes you to the In Game Menu. From here you can exit the game, save your game or reload a previous save. Highlight your pilot's name or create a new name, **LMB Save** and confirm to save your game. If anything happens later, we can always reload.

LMB Done, and exit back to the Concourse.

Ship Dealer (p25)

Fireworks! Lots and lots of fireworks!

Our last point of call before leaving is the Ship Dealer. If you want to repair, upgrade or change your ship, this is the place to do it. From the Ship Dealer, locate and access the Upgrades Booth, then click on the Computer Screen. This screen is operated in a similar manner to the Commodities Exchange. Feel free to have a look at the available upgrades at Achilles. Since you used your credits to buy your cargo, you probably can't afford anything here. After a cargo run or two, you will hopefully have enough credits available to be able to afford something from here. For now, just note that the right screen shows the upgrades currently on your ship. If you get into trouble, at least you have something to fight back with!

Tutorial 2: Your First Cargo Run

Well, that was a nice, peaceful interlude. Achilles isn't so bad, but I'm not the type of person who's happy, covered in dirt and dust unless it's from a spaceport. I've got wanderlust, and a whole universe to indulge it with!

It is suggested that the player read **Chapter 0** before continuing.

Well, that's the whole point isn't it? You're the type of person who sees life as a journey to the grave, not with the intention of arriving safely in a pretty and well preserved body, but rather to skid in broadside, thoroughly used up, totally worn out, and loudly proclaiming 'Wow! What a ride!' But if you want the stars, there are a couple of guidelines worthwhile following.

Return to the Concourse and locate your ship. Sometimes, the Concourse may have access to a Landing Pad, but either way, you want to find your ship and highlight it. **LMB** your ship to initiate the launch sequences.

After lift-off, your screen will be replaced with a Cockpit View. Overlaying that will be a large box, your Nav Map. Use **SHIFT+M** to hide the Nav Screen, since you are following this tutorial. Later, you will use the Nav Screen to find your way around the known systems. Right now, though, you should be looking into space.

Press **t**. This cycles your targeting system (p53). Notice the multi function display unit (MFD) changes its name and picture. On screen, a box may appear around some feature in the distance, and your scanner will show a '+'. This is your current target. This could be a destination, point of interest or hostile spacecraft. Press **t** repeatedly until the Agricultural Planet Helen is targeted. Press **I**. This locks onto the targeted base. Using your mouse, keyboard or joystick, re-orient your ship until the solid gray box (representing the location of the base) is in the center of your screen.

Now that we're pointed in the right direction, we want to get there. Press **=**, **+** or **KP+**. You will see a couple of indicators above the detection array increase from zero (0). These represent your set velocity and current velocity. Repeatedly pressing (or holding down) these keys will increase this number to a maximum point. Alternatively, **I** will set your maximum velocity, to which your current velocity will eventually match.

Under normal playing conditions, you could take hours to travel around a system. Privateer Gemini Gold, however, incorporates an Autopilot function that shortens the transition time between locations when there's nothing happening along the way.

You may notice the 'Autopilot' light in your cockpit. This indicates you can use the autopilot function. Press **a**. Your cockpit view changes to a camera panning around your ship, then reverts back again. You will notice you are now 15,000 meters away from your destination.

As you approach Helen, the closer you get, the bigger it gets. At some point, you will be informed about reaching the automatic landing zone, then you have very little time to turn your ship around otherwise you will land. Once landed, your HUD will be replaced with the Landing Pad at the Agricultural Planet Helen. Using the skills from Tutorial 1, access the Commodities Exchange, and sell your cargo. Don't forget to save! Your cargo bay should be empty, and you should have more credits than you started with.

Congratulations! You have made your first cargo run!

Tutorial 3: Making Some More Money

Well, that wasn't so hard was it? Used my head, bought some cargo, moved it to where it's needed and sold it, making some money out of the deal. I'm going to need more though. I've got lots of cargo space, and I don't want pirates getting their hands on anything in MY hold!

Obviously, you're going to need more money than what you made from your first cargo run. Repeat the process in tutorial 2, buying cargo at low prices, traveling to another base and selling high. The key is to find out what cargoes will make the most money, depending on the base you're buying from, and planning to sell to. This comes from experience, and landing at different bases.

As a hint, we recommend buying Food and transporting it for your second run to the other Mining Base, Hector. Don't go back to Achilles until your fourth run, to give it time to generate more Raw Materials. From Hector, take Raw Materials back to Helen, picking up Food to take to Achilles. This is a pretty good circuit to begin with, building up some credits.

Along the way, don't forget to upgrade your ship! Adding more weapons, shields, armor, reactor power and various other upgrades will improve your ship over and above what you started with. It is a balancing act, spending credits on upgrades, as opposed to buying more cargo to make even more credits with, but eventually, someone is going to notice you, moving around the system and making money. Eventually, you will have to face a hostile opponent, and engage in combat.

Tutorial 4: Combat

It had to happen. Some nosy pirate, interfering Retro or worse, a Kilrathi force had to muscle in on my moneymaking. What's a pilot to do?

It is suggested that the player read **Chapter 0** before continuing.

The Wing Commander Universe is a dangerous place. Somewhere, sometime, a pilot has to be prepared to kill or be killed.

So, are you going to panic, or go in, guns blazing? Usually you realize you are about to have a battle because of a change in the music tempo. Another indicator is the lock light flickering in your HUD. Either way, something's got to give.

Once you are aware of hostile opponents, Press **h**. This will target any opponents targeting you. You could use other targeting keys, but **h** gives the quickest result, and the closest threat. Re-orient your ship until you facing your target. While doing this, switch your Multi Function Display unit (MFD) to guns and missiles using **g**. Cycle through your gun selection using **g** until you are happy with your gun load out. Similarly, use **w** to select your missile load out.

Your personal preferences will eventually suggest an attack velocity, but for now, have your Tarsus set velocity at full. Your aiming reticule (the circle and cross in the center of the HUD), should be directly over your opponent if you are head to head or on their tail. Otherwise, you want to aim slightly in front of their direction of travel, as your weaponry takes a small amount of time to travel between your respective positions (this is called leading your target). Once within range of your various weapons, trigger your fire control (**SPACE** or **LMB** for guns; **ENTER** or **RMB** for missiles; or your appropriate joystick buttons). Expect your opponent to try to evade your fire, so make sure you keep your weapons on your target.

Note the MFD. This shows your opponent surrounded by its shields. As you fire upon your opponent, these shields will steadily reduce to nothing. Further hits on your opponent will then damage armor, and finally any critical ship components. The ship's icon in the MFD will redden as your opponent takes damage. Meanwhile, keep an eye on your shields in the bottom left of the HUD. Your opponent is trying to do the same to you. Combat, therefore, involves your attempting to reduce your opponent's shields and armor, and evading your opponent's returning fire, since they are trying to do the same to you.

Eventually, one ship (whether through luck, skill or superior hardware) will defeat and destroy the other. You want it to be you, since the other doesn't bear thinking about. A suitably large explosion will reward you as your opponent comes apart at the seams. At this point, press **h** again to cycle to your next closest opponent. If you find one, follow the above process and destroy them, ship by ship. It is highly recommended that you destroy your first opponent before attacking another. This ensures the first opponent does not have time to regenerate their shields, which you have just spent time and energy removing. Remember, ALL of your opponents will be attacking you, so your ship is losing shields and armor, and time is of the essence.

If no opponents remain then congratulations! You have survived your first battle! Now, assess your damage. It may be that you now need to seek repairs to your ship. If so, dock at the closest habitable base or planet. Proceed to the Upgrades Screen (p25) and select **Basic Repair**. You may need to replace various ships' components too. While you are here, replace any missiles used, you never know when you'll need them next.

Tutorial 5: What Next?

When you have enough credits to spare, buy a jump drive. When back in space, select a jump point as a destination and autopilot to it. Fly into the blue sphere, then press **j** to activate your jump drive. You will watch a short animation, at the end of which you will note that you are now in a new system. Now its just a matter of learning your way around Gemini sector!

This ends this series of tutorials. You should now have the basics on how to move about on a base, navigate the stars and defend yourself against danger. Make some more credits, upgrade or even change your ship.

Then, feel free to journey to the stars!

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

0. PREAMBLE

The purpose of this License is to make a manual, textbook, or other functional and useful document "free" in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondly, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of "copyleft", which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

1. APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The "Document", below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as "you". You accept the license if you copy, modify or distribute the work in a way requiring permission under copyright law.

A "Modified Version" of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A "Secondary Section" is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document's overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A "Transparent" copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not "Transparent" is called "Opaque".

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of

Wing Commander - Privateer Gemini Gold

transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The "Title Page" means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, "Title Page" means the text near the most prominent appearance of the work's title, preceding the beginning of the body of the text.

A section "Entitled XYZ" means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Here XYZ stands for a specific section name mentioned below, such as "Acknowledgements", "Dedications", "Endorsements", or "History".) To "Preserve the Title" of such a section when you modify the Document means that it remains a section "Entitled XYZ" according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties: any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License.

2. VERBATIM COPYING

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

3. COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document's license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material.

If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

4. MODIFICATIONS

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.

List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement.

State on the Title page the name of the publisher of the Modified Version, as the publisher.

Preserve all the copyright notices of the Document.

Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.

Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.

Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.

Include an unaltered copy of this License.

Preserve the section Entitled "History", Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section Entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.

Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.

For any section Entitled "Acknowledgements" or "Dedications", Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.

Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.

Delete any section Entitled "Endorsements". Such a section may not be included in the Modified Version.

Do not retitle any existing section to be Entitled "Endorsements" or to conflict in title with any Invariant Section.

Preserve any Warranty Disclaimers.

Wing Commander - Privateer Gemini Gold

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These titles must be distinct from any other section titles.

You may add a section Entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties—for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

5. COMBINING DOCUMENTS

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled "History" in the various original documents, forming one section Entitled "History"; likewise combine any sections Entitled "Acknowledgements", and any sections Entitled "Dedications". You must delete all sections Entitled "Endorsements".

6. COLLECTIONS OF DOCUMENTS

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

7. AGGREGATION WITH INDEPENDENT WORKS

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, is called an "aggregate" if the copyright resulting from the compilation is not used to limit the legal rights of the compilation's users beyond what the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document's Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate.

8. TRANSLATION

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled "Acknowledgements", "Dedications", or "History", the requirement (section 4) to Preserve its Title (section 1) will typically require changing the actual title.

9. TERMINATION

You may not copy, modify, sublicense, or distribute the Document except as expressly provided for under this License. Any other attempt to copy, modify, sublicense or distribute the Document is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

10. FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See <http://www.gnu.org/copyleft/>.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation.

ADDENDUM: How to use this License for your documents

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Wing Commander - Privateer Gemini Gold

Copyright (c) YEAR YOUR NAME.

Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.2 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts. A copy of the license is included in the section entitled "GNU Free Documentation License".

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the "with...Texts." line with this:

with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST. If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation. If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.

Quick Key Guide

Navigation-Direction Keys

Name	Key(s)	Command	Description
Up	[CURSOR-UP] [KP-8]	<i>UpKey</i>	Align thrusters up, moving nose of your ship down.
Down	[CURSOR-DOWN] [KP-2] [KP-5]	<i>DownKey</i>	Align thrusters down, moving nose of your ship up.
Rotate Right	[CURSOR-LEFT] [KP-4]	<i>RightKey</i>	Rotates your ship to the right.
Rotate Left	[CURSOR-RIGHT] [KP-6]	<i>LeftKey</i>	Rotates your ship to the left.
Roll Right	[DEL] [.] [KP-*]	<i>RollRightKey</i>	Roll your ship to the right.
Roll Left	[INS] [.] [KP-/]	<i>RollLeftKey</i>	Roll your ship to the left
Jump Drive	[J]	<i>JumpKey</i>	Press this to jump to another system. You must be within the blue sphere to activate.
Autopilot	[a]/[A]	<i>AutoKey</i>	Activate travel transition (autopilot).

Navigation-Speed/Velocity

Name	Key(s)	Command	Description
Decelerate	[=] [KP-]	<i>DecelKey</i>	Decrease set velocity of your ship.
Accelerate	[KP+] [=] [+]	<i>AccelKey</i>	Increase set velocity of your ship.
Afterburner	[TAB]	<i>ABKey</i>	Will accelerate your ship past set velocity. Afterburner velocity is not constant, and must be maintained by holding down the TAB button. Velocity will decrease to set velocity when released.
Match Velocity	[F9]	<i>SetVelocityRefKey</i>	Sets your zero velocity to your target's current velocity.
Reset Velocity	[F10]	<i>SetVelocityNullKey</i>	Reset your zero velocity relative to the system's sun.
Stop	[BACK SPACE]	<i>StopKey</i>	Set current velocity to zero.
Full Throttle	[N]	<i>StartKey</i>	Set your velocity to maximum ship capable velocity.
Shelton Slide	[`]	<i>SheltonKey</i>	Perform a Shelton Slide.

Target-Select

Name	Key(s)	Command	Description
Target Display	[e]	<i>TargetMode</i>	Display 3D target object including damage and shield status in MFD.
Deactivate MFD	[O]	<i>ScanningMode</i>	Deactivates (blanks) the MFD.
All Units	Forward:[t] Backward:[T]	<i>TargetKey ReverseTargetKey</i>	Switches through all targets in front of your ship.
Significant/Neutral Units/Targets	Forward:[n] Backward:[N]	<i>SigTargetKey ReverseSigTargetKey</i>	Switches through all significant/neutral targets in current system.
All Units/Targets	Forward:[u] Backward:[U]	<i>UnitTargetKey ReverseUnitTargetKey</i>	Switches through all targets in front of your ship as well as all waypoints.
Hostile Units/Targets	Forward:[h] Backward:[H]	<i>NearestTargetKey ReverseNearestTargetKey</i>	Switches through all targets currently targeting you.
Subunit Select	[b]	<i>SubUnitTargetKey</i>	Switches through the subunits of the ship you have currently selected.
Lock Unit/Target	[I]	<i>LockTargetKey</i>	By pressing this key you can 'lock' your selection on the selected target.
Front Targets	[y]	<i>PickTargetKey</i>	Pressing this key will pick Units in front of you (near the crosshair). Tends to be used to get planets in front of you.
Save Target	[ALT+1-0]	<i>SaveTarget1-0</i>	Save up to ten targets to memory.
Restore Target	[CTRL+1-0]	<i>RestoreTarget1-0</i>	Recalls previous saved target.

Combat

Name	Key(s)	Command	Description
Fire Weapon/Guns	[SPACE]	<i>FireKey</i>	Fires your main weapons/guns (beams/bolts/chainguns/whatever).
Select Weapon/Gun	Forward:[g] Backward:[G]	<i>GunMode ReverseGunMode</i>	Switches through your main weapons.
Fire Missiles/Torpedoes	[RETURN] [KP-ENTER]	<i>MissileKey</i>	Fires your missiles/torpedoes if your ship has some of them equipped.
Switch Missiles/Torpedoes	Forward:[w] Backward:[W]	<i>MissileMode ReverseMissileMode</i>	Switches through your main missiles/torpedoes.
Report Damage	[r]	<i>DamageMode</i>	Display vital ship components and their status.
Cloaking Device	[ALT+c] [CTRL+c]	<i>CloakKey</i>	By pressing this key you enable/disable your Cloaking device (if you have one).
Shield Power 2/3	[s]	<i>SetShieldsTwoThird</i>	Toggle shield power to two thirds.
Shield Power 1/3	[S]	<i>SetShieldOneThird</i>	Toggle shield power to one third.

Communication (General)

Name	Key	Command	Description
Comms VDU	[c]	<i>CommMode</i>	Activate communications MFD. Communication is with targeted object.
Talking to other ships/stations	[1]-[9]	<i>Comm1Key->Comm9Key</i>	Send selected message to targeted object by pressing one of this buttons. Note that a higher number means more aggression in your voice.

Camera-Control

Name	Key	Command	Description
Toggle Cockpit	[F1]	<i>Cockpit::Inside</i>	View to your front.
Look Left	[F2]	<i>Cockpit::InsideLeft</i>	View to your left.
Look Right	[F3]	<i>Cockpit::InsideRight</i>	View to your right.
Look Back	[F4]	<i>Cockpit::InsideBack</i>	View looking to the rear.
Turret	[F5]		Switches to turret view. Switches through turrets.
Panning Camera	[F6]	<i>Cockpit::Pan</i>	Provides a panning camera view of your ship. Move the camera by using the panning keys.
Target Camera	[F7]	<i>Cockpit::OutsideTarget</i>	Full screen 3 rd -person view of your selected target.
Target Panning Camera	[F8]	<i>Cockpit::PanTarget</i>	Full screen panning camera view of your target. Move the camera by using the panning keys.
Pan Up	[HOME]	<i>Cockpit::PitchDown</i>	When panning, moves the camera up
Pan Down	[END]	<i>Cockpit::PitchUp</i>	When panning, moves the camera down
Pan Left	[INSERT]	<i>Cockpit::YawLeft</i>	When panning, moves the camera left
Pan Right	[DELETE]	<i>Cockpit::YawRight</i>	When panning, moves the camera right
Zoom View In	[F11]	<i>Cockpit::ZoomIn</i>	Zoom in on target.
Zoom View Out	[F12]	<i>Cockpit::ZoomOut</i>	Zoom out on target.
Target Camera	[v]	<i>Cockpit::ViewMode</i>	3 rd -person view of target in a MFD.
Screenshot	[i]	<i>Screenshot</i>	Takes a screenshot without targeting brackets or docking clamps.

Game-Commands

Name	Key(s)	Command	Description
Toggle Quit Mode	[ESC] [ALT+x]	<i>Cockpit::Quit</i>	Brings up Quit function. Press [q] to quit.
Pause	[p] [PAUSE]	<i>PauseKey</i>	Pause the game.

Turret(s)

Name	Key	Command	Description
Switch Turret Control	[F5]	<i>TurretControl</i>	By pressing this button you can switch to the manual control of your turret(s) (if you have one/some equipped) and switch back to cockpit control.

Info/Mission/Cargo

Name	Key	Command	Description
Nav Screen	[SHIFT+M]	<i>Cockpit::NavScreen</i>	Activate/Deactivate Map screen during flight.
Manifest Display	[m]	<i>Cockpit::ManifestMode</i>	Activate your Cargo Manifest.
Scroll Text Up	[PGUP] [KP-9]	<i>Cockpit::ScrollUp</i>	Scroll selected MFD up
Scroll Text Down	[PGDN] [KP-3]	<i>Cockpit::ScrollDown</i>	Scroll selected MFD down
Eject Cargo	[X]	<i>EjectCargoKey</i>	Ejects the selected (topmost) cargo in your cargo bay into space. Use the scroll text keys to move the appropriate cargo to the top.
Eject Non-Mission Cargo	[CTRL+x]	<i>EjectNonMissionCargoKey</i>	Similar to Eject Cargo, but will only eject non-mission cargo.
Objectives Display	[o]	<i>ObjectiveMode</i>	Display current mission objectives MFD.

Sound and Music

Name	Key	Command	Description
Skip Music Track	[CTRL+s]	<i>Cockpit::SkipMusicTrack</i>	Skip Music Track
Sound Volume Up	[ALT+.]	<i>VolumeInc</i>	Sound Volume Up
Sound Volume Down	[ALT+,]	<i>VolumeDec</i>	Sound Volume Down
Music Volume Up	[>]	<i>MusicVolumeInc</i>	Music Volume Up
Music Volume Down	[<]	<i>MusicVolumeDec</i>	Music Volume Down

Multi Function Display

These commands may have been listed previously, but are placed here as reference for the MFD.

Name	Key	Command	Description
Comms VDU	[c]	<i>CommMode</i>	Activate communications MFD. Communication is with targeted object.
Talking to other ships/stations	[1]->[9]	<i>Comm1Key->Comm9Key</i>	Send selected message to targeted object by pressing one of this buttons. Note that a higher number means more aggression in your voice.
Select Weapon/Gun	Forward:[g] Backward:[G]	<i>GunMode</i> <i>ReverseGunMode</i>	Switches through your main weapons.
Switch Missiles/Torpedoes	Forward:[w] Backward:[W]	<i>MissileMode</i> <i>ReverseMissileMode</i>	Switches through your main missiles/torpedoes.
Report Damage	[r]	<i>DamageMode</i>	Display vital ship components and their status.
Target Camera	[v]	<i>Cockpit::ViewMode</i>	3 rd -person view of target in a MFD.
Target Display	[e]	<i>TargetMode</i>	Display 3D target object including damage and shield status in MFD.
Manifest Display	[m]	<i>Cockpit::ManifestMode</i>	Activate your Cargo Manifest.
Objectives Display	[o]	<i>ObjectiveMode</i>	Display current mission objectives MFD.
Deactivate MFD	[O]	<i>ScanningMode</i>	Deactivates (blanks) the MFD.
